HELPER COIN

Whitepaper

VERSION 1.0

TABLE OF CONTENT

ABSTRACT

CallforBlessing is an online platform that aims to bring people of Christian beliefs together. We aim to connect the people of the World's Largest Community through our intuitive, user-friendly mobile app. Not just, we connect them together to share their thoughts and prayers online, but to help them in their daily lives.

By using the power of Blockchain Technology, we build a fully transparent, secured, and 24*7 operational system that allows people to donate cross-boundaries easily and within minutes. This can only be made possible by the use of Helper Coin. Helper coin is designed to provide for the needs of every person, missionary, or Christian organization such as the Church from anywhere in the globe.

This paper has been written to provide you with the technical and functional details of the Helper coin and the CallforBlessing app.

INTRODUCTION

CallforBlessing is a community of people which believes in giving and serving others. It is a place that helps to enhance the spiritual growth of every individual Christain, by praying, listening to devotional songs, reading spiritual books, etc.

CallforBlessing allows you to strengthen your outreach within the Christian community members as well as it allows you to give and take help financially through our digital currency Helper Coin.

THE PROBLEM

We have been made in God's Image to serve for his Kingdom and to serve each-other at the time of need. But, the question is HOW? People are willing to help and serve globally, but still the help is unable to reach the right people at the right time. When it comes to helping people financially, then the question arises, HOW?

The involvement of middlemen, tedious banking protocols makes overseas transactions difficult and limited.

Can you name a platform which allows you to interact with your community-based people, purchasing spiritual books, encouraging and heart touching devotional songs in multiple languages, and the opportunity to pray for people at the same time?

There are times when we travel in different cities we are unable to locate and attend nearby churches, which makes us feel dry spiritually. Attending churches enriches our soul. Finding a soul mate in the Christian community has been challenging nowadays.

Is there any platform which provides you all these services/facilities in a cluster?

THE SOLUTION

Blockchain Technology is the only answer to this real-life challenging problem. By using cryptocurrency (a digital currency underneath Blockchain Technology) "anyone" can send "any" amount of money to "anyone" and anywhere in the world. Isn't it interesting?

And, with the use of the Helper coin, we have made this possible for the people of Christian beliefs to donate money from "anywhere" to "anywhere" around the world. This Decentralized ledger technology also allows donors to keep a track of their money until consumed by a person in need.

Our team has tried hard to fetch the best possible solution for you through our CallforBlessing app. We offer a one-stop solution for all your religious needs. No matter how old you are, we offer a perfect mix of services for people of every age.

And the most important part is, we only accept payments made via Helper Coin, which is our platform's native currency. Accepting payments in cryptocurrency provides transparency and security to our platform. Additionally, Cryptocurrencies make cross-border payments painless and fast.

Our vision is to encourage the people of the Christian community to come together and serve each other and help the growing needs of the people in expanding the kingdom of God, by becoming digitally strong and making the use of the resources in this digital world.

CALL FOR BLESSING -
THE IDEA BEHIND THE PROJECT

The main idea behind the project is to unite people for a noble cause. The crux of our project is to serve the right people in the right way. We tried to create an environment that is stress-free, giving, and healthy. And, the best part is, everything is just a few taps away from you. You don't have to travel anywhere to be a part of our team. You can connect to thousands of people to share thoughts, prayers, and photos right from your place.

ABOUT THE PROJECT

Callforblessing is a mobile application that can be installed like any other mobile application on your mobile. By leveraging the power of blockchain technology, we tried to create a virtual place where God resides. There is a proverb that states "No one returns empty-handed from the house of God." We believe that whoever comes to our platform seeking help, should be blessed and we work day and night to make that happen with the help of you.

Callforblessing is a digital community of all lovely people like you who have come forward to help each other uniquely.

SIGN UP

PLATFORM

Users can access our platform by using their desktop or laptop through the web. We also have a mobile application that is available for both platforms, Android and iOS.

CallforBlessing is not a typical application that can only be used for praying or for some religious work. Rather, it is also a social media platform where people of the same beliefs and faith can connect and message each other privately. They can post photos and add stories to their timeline, just like they do on Facebook.

Our application uses several filters to make sure only people of the Christian community who are serious and dedicated can join our platform as registered users.

CallForBlessings

CALL FOR BLESSING –
BRINGING LIGHT INTO DARKNESS

We are passionate about raising a helping hand and showcasing God's love to others. We are focused on supporting and maintaining healthy relations that will heal your wounds either by doing prayers or by listening to your heart. We aim to try every way out that will bring light into your lives. Our app makes it much easier and secure to donate and receive funds.

Backed by blockchain technology, our platform eliminates the need for a middleman, such as banks, to process the transactions. Donors can directly deposit their donation into the end-users account privately in the form of cryptocurrency. Donors can purchase Helper coins from any of the listed exchanges and send them to the receiver's account.

On the other end, the receiver can sell them at any listed exchange in return for fiat. But before, users need to connect their crypto wallet to our platform. It is advisable to send coins after the connection is successfully established to avoid any loss of funds.

We want your support to spread light and positivity all around, even if only in small ways. Your small support holds the power to change one's life. And, CallforBlessing is the first step towards it.

CALL FOR BLESSING –
IT'S ONE FOR ALL

CallforBlessing is one place for all your religious needs. From spiritual books to short movies, and from religious clothes to decorative home accessories. We have got you all covered. Here, you will get everything that a Jesus lover has ever dreamed of.

The mind plays a very vital role in our lives. Keeping it cool and smart should be our priority. Reading books can keep you calm, relax your mind and enrich your knowledge while playing quizzes makes your brain sharp and active. Thus, we strive to bring religious books from famous writers in multiple languages under one roof.

Users can download their favorite e-books from our e-store. They can also order them from the comfort of their home. Not just this, they can even play a religious quiz on our platform to check their knowledge and win exciting prizes.

Also, we have made it easier for you to find a suitable match. Through our app, parents/guardians/boys/girls can create profiles and look for a suitable match in their community.

We will talk about more features of our app later in this whitepaper.

PLATFORM'S DIGITAL CURRENCY -
HELPER COIN

CallforBlessing uses the cryptocurrency Helper Coin. Helper coin is a BEP-20 type token. It is built on the top of the Binance Smart Chain to facilitate transactions among two persons, providing transparency and decentralization.

Transactions made through Helper coin are easy and unbiased to any person living at any place in the world (because all the transactions are carried out using a single currency and not made by using different currencies from different areas of the world). Additionally, It helps to overcome the physical barrier of the banks, prevents paperwork, saves time, and most importantly, transactions made using cryptocurrencies are quick and free from any external transaction charges.

Banks or other donation portals charge high transaction fees plus currency conversion charges, sometimes up to 2-3%. But donating on our platform using Helper coin keeps you free from all these kinds of additional charges that create an extra burden on both sender and receiver.

FEATURES OF
CALLFORBLESSING APP

01

CALLFORBLESSING AS AN E-COMMERCE PLATFORM:

One can understand and use our platform as an online shopping platform to buy religious things. Users can order spiritual books like Bibles and well knows authors' collections like benny hin, etc.,. One can also buy stuff like t-shirts which will have bible verses on it, book markers, planners with bible verses, diaries, calendars, Bible covers, etc on our app.

02

CALLFORBLESSING AS A SOCIAL MEDIA PLATFORM:

If you are a social media lover and love to upload photos and add stories to your timeline then, you are at the right place. Users can also use our platform to share their stories, post their photos, and upload short videos. Decency and security is our top priority! The videos, photos, and stories will be verified and approved at the backend and then uploaded to this platform.

You can send a friend request, accept one, or decline one depending upon your comfortability to connect with the person. Friends can chat, send pictures, and audio messages to one another privately in a chat box. You can also choose to make your details public, private, or limited to your directory. Users can like, comment, and share each other's photos.

You can even create an event by adding your friends and venue. Our app also allows you to send an event invite to your friends. Like Facebook, you can also make a business page on our platform to promote your business.

03 CALLFORBLESSING AS A RELIGIOUS PLATFORM:

Users can create a room for prayer like praying in a virtual Church. People can join the prayer globally through a voice or video call. Registered users can upload their living testimonies or watch video clips, based on a true event and much more.

We have quiz time for the young brains to learn the bible and provide our users with an offer to win exciting prizes if they stand to be a winner.
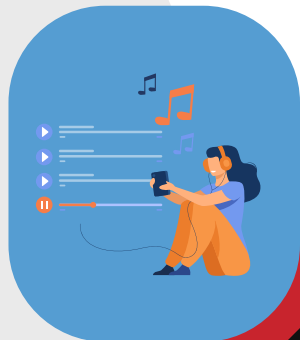

04 CALLFORBLESSING AS A MATRIMONIAL APP:

Finding a suitable match is one of the toughest tasks in one's life. We strive to make it easy for you by introducing matrimonial services on our platform. Users can create eligible bride/groom profiles and set their expectations. According to your settings, your profile will soon start receiving the interests of people from your community and you can connect with the best, matching your expectations.

05 CALLFORBLESSING AS AN ENTERTAINMENT APP:

With our Joy music service, users can listen to a variety of songs from famous Christian singers in multiple languages. You can add your favorite songs to your playlist and listen to them later.

06 CALLFORBLESSING AS A TRACKING APP:

Devotees can use our app to find the location of nearby Churches when traveling to a new location. This feature displays a list of nearby Churches as well as locate them on a map and let you easily navigate to any location with just one tap.

07 CALLFORBLESSING AS A NEWS UPDATE APP:

It's always important to know the latest happenings in the Christain World. We provide you with the latest news headlines and updates of the Christain world globally, which will help you to keep yourself updated.

08 CALLFORBLESSING AS SUPPORT FOR ACKNOWLEDGING YOUR PURPOSE IN GOD'S KINGDOM:

This platform allows young generations to enhance their spiritual life and be inspired by allowing them to share blogs, Daily articles, devotionals. CallforBlessing is the Christian platform to connect to real people with real faith. Here you will find practical tips, stories, insights, encouragement, and love to move you closer to God.

Note:- Each content will be verified with the Bible, and after verification and research study it will be allowed to be posted publicly.

MIRROR

We are putting forward a blockchain video player which shall work decentralized. With that, it simply means that the player is going to work without the interference of any middlemen. The videos through the blockchain player will be available using the blockchain platform where accounts shall be extended with the backing of the version 3.0. Further, channels from the account will be able to earn helper coins. In addition, video viewing and sharing will also be done via paying the helper coins.

Moreover, advertisements will also work through helper coins. Another benefit shall mark its identity with the fact that the video likes will also be awarded the help of helper coins. The trailers launch, video launch, and song launch would also be handled with the help of helper coin. Not only limited to this, but videos will also be available and managed in a systematic & categorized way. Lastly, with our blockchain video player, users will be able to witness the trending & latest videos: Video of the day, Video of the week, and Video of the month.
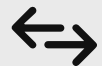

DEX

To mark the transparency in our application, we have built a Decentralized Exchange or DEX; a peer-to-peer (person-to-person) marketplace where transactions occur directly between a buyer and a seller(who share the mutual connection for Christianity religion). The main purpose of the DEX platform is to fulfill one of the core possibilities of crypto- to encourage financial transactions which directly don't involve any middlemen such as banks, brokers, or any other intermediary- with a backing of blockchain-based smart contracts which promotes asset exchange(for the Call For Blessings app, the asset can be anything related to the Christianity religion).

Talking about that, our DEX utilizes the "Ethereum" blockchain that will make a huge range of financial services available directly from a compatible crypto wallet. Additionally, if seen in comparison to traditional financial transactions, which are opaque and run through intermediaries allowing a restricted permeability to the actions, our DEX platform offers 100% transparency into the movement of funds & the mechanisms facilitating exchange.

DEXs also lessen counterparty risk and can lessen systemic centralization problems in the bitcoin ecosystem because user money doesn't transit via a third party's cryptocurrency wallet during trading.Furthermore, our DEX is built on open-source code, meaning that if you are interested in knowing how it works, you can.

SWAPPING

With our swap facilities, it expedites the seamless crypto-to-crypto exchange without the intervention of any intermediaries involved in the process. By utilizing a swap-enabled exchange platform, one can exchange non-native tokens directly from the official crypto wallet we create.

ORDER BOOK

An order book is a real-time collection of open buy and sell orders in the market. In our case, it will be the buying and selling of holy products of the Christianity religion. It is a foundational pillar of electronic exchanges. Through our exchange, the order book can assist in buying & selling orders amongst the people who develop the same faith for the religion of Christianity..
NFT

Talking about NFT(Non-Fungible Token), it is normally created by utilizing the same type of programming which is used for cryptocurrencies. Simply put, these are cryptographic assets that are based on blockchain technology. Unlike other cryptographic assets, these cannot be exchanged or traded. Because of their unique proper-ties, they cannot be traded or exchanged for each other.
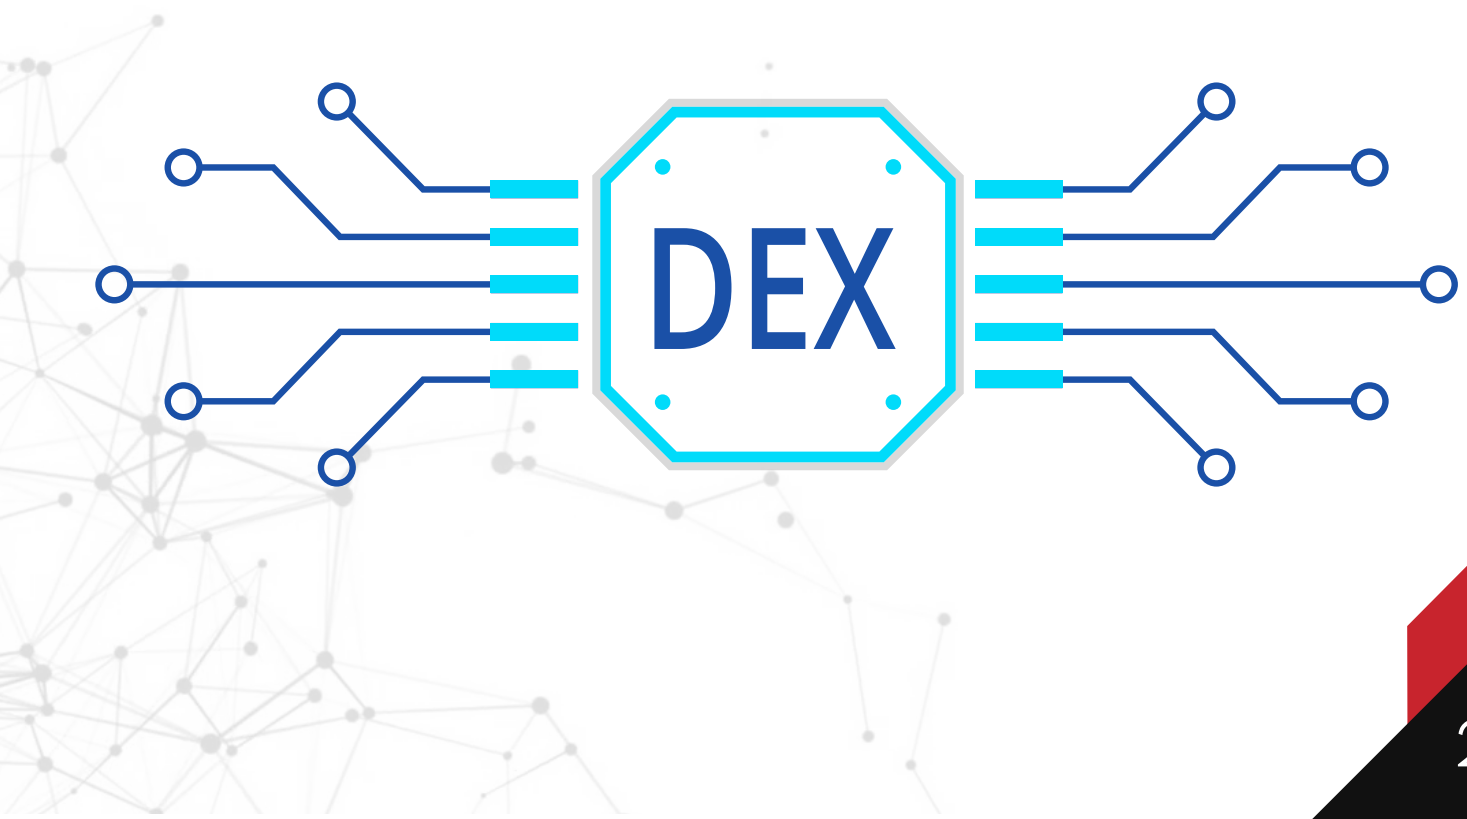

BONDS

Through our decentralized bond, an investor or a user can participate in the success of a company without facing any risks. In this, money is secured for the entire investment period, extending an extra layer of peace of mind. It is a centralized IOU issued on a blockchain. And, since it is leveraged on the blockchain, it doesn't have to face the role of any intermediary.
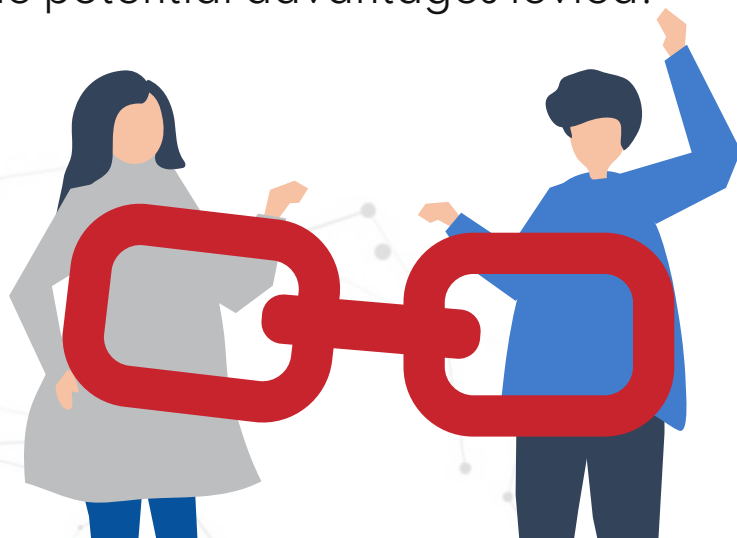

P2P

We have a p2p or Peer-To-Peer service which is a decentralized platform where two individuals interact directly with each other, without the interference of any third party. Instead, both the parties on our platform(who share the mutual consent over Christianity) transact directly with each other via the P2P service. Our P2P platform offers services like escrow, money processing, search, screening, and rating.

DECENTRALIZED P2P TRADING

Our decentralized exchange is a peer-to-peer(P2P) marketplace that brings our helper tokens to sellers and receivers'. Our decentralized peer-to-peer trading platform is non-custodial, which means users retain ownership of their private keys when doing transactions on a DEX platform. Smart contracts are used by DEXs, which autonomously complete each transaction and add them to the blockchain in the absence of a central authority. These safe, trustless transactions are a developing area of the digital asset market and are paving the way for new financial products.

As we have talked about earlier, our DEX platform doesn't employ any intermediary organization to clear transactions, rather our platform leverages the functionality of self-executing smart contracts. With the absence of any intermediary, DEXs take on a non-custodial framework in which you manage the control of your private keys and cryptocurrency funds as well. Furthermore, even in the initial stages of our DEX development, there are some potential advantages levied.

CUSTODY

Our DEX platform is non-custodial, meaning the traders don't need to relinquish the control of private keys to transact. Instead, our external held wallets interact with DEXs, and trades self-execute through smart contracts.

TRUSTLESS TRANSACTIONS

Without the interference of any central authority, our DEX executes trades via smart contracts and further records them to the blockchain, ensuring trustless transactions. And since DEXs do not hold any funds, they are less targeted by the hackers.

PRIVACY

Since the wallets are kept externally and our DEX is not responsible for the funds, traders using decentralized exchanges are not required to divulge their private keys. Users are often exempt from KYC and AML requirements when utilizing our DEX platform for the same reason.

LOWER FEES

Our Decentralized exchange works with self-executing smart contracts, in the absence of an intermediary, our DEX charges a lower fee.   However, the fee might fluctuate in response to the network utilization, they remain lower in comparison to the costs levied on the centralized alternatives.

Thank you

Helper Coin
