kabosu

Whitepaper V2 – June 2021

CONTENTS

Inu

Complete Ecosystem
INU is a project that has the goal to become the largest operational platform in DeFi and the crypto-space as a whole.

Multi Layered Platform
A multi-layered platform that will allow users to perform different tasks within one, seamless Ecosystem.

Ease Of Use
Our vision is focused on making it easier for people to operate with crypto assets, creating multiple use cases tied to a common operating asset.

kabosu

KABOSU aims to become a globalized decentralized alternative for holders in the light of an ever-expanding market.

Starting with the release of Kabosu on May 10th, and continuing with the release of INU in the near future.

The ecosystem will be deployed through a multi-stepped plan (detailed later in this document).

Beginning with a Decentralized Exchange (CEX/AMM) coming in the next month, accompanied by the release of the global token INU.
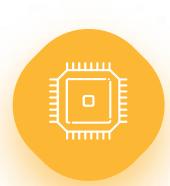

The Ecosystem will entail a DEX, a wallet, an NFT Marketplace, a token bridge, a staking protocol, a pet adoption platform tied to charitable work, and finally, our own Centralized Exchange, all tied to the token KABOSU.

Our Use

As we progress on the ecosystem's growth...

The individual use of each token will be signaled and explained in detail on branch-specific documents. For now, the general functionality will be developed upon in this whitepaper:

Each token serves as a "share" asset that allows you to conduct several operations on each platform, whilst taking off sell-pressure to the main inflationary asset (INU). The idea is to have each branch operate individually, but allow users to utilize INU to be able to move back and forth between branches.

Users will be required to pay use fees on INU, and to conduct operations with each of the branches' specific share-type assets, either by stake-type operations or straight-up fees. An example to better illustrate this can be the NFT marketplace branch. Holders of INU are going to be able to access the platform and utilize the platform, whilst holders of the specific branch asset will be able to process bids and payments with such assets.

Another example can be the token bridge, utilizing our assets to move freely between networks and paying fees on INU. With the initial DEX/AMM release, people will be able to farm/stake their ecosystem tokens as well as other assets, exchange tokens using our very own backend and frontend and utilize INU to participate in lottery events. Becoming our first proper use case for the ecosystem.

Charity

The World's 1st Dog Themed Token That Rewards You, Whilst Giving Dogs a Home
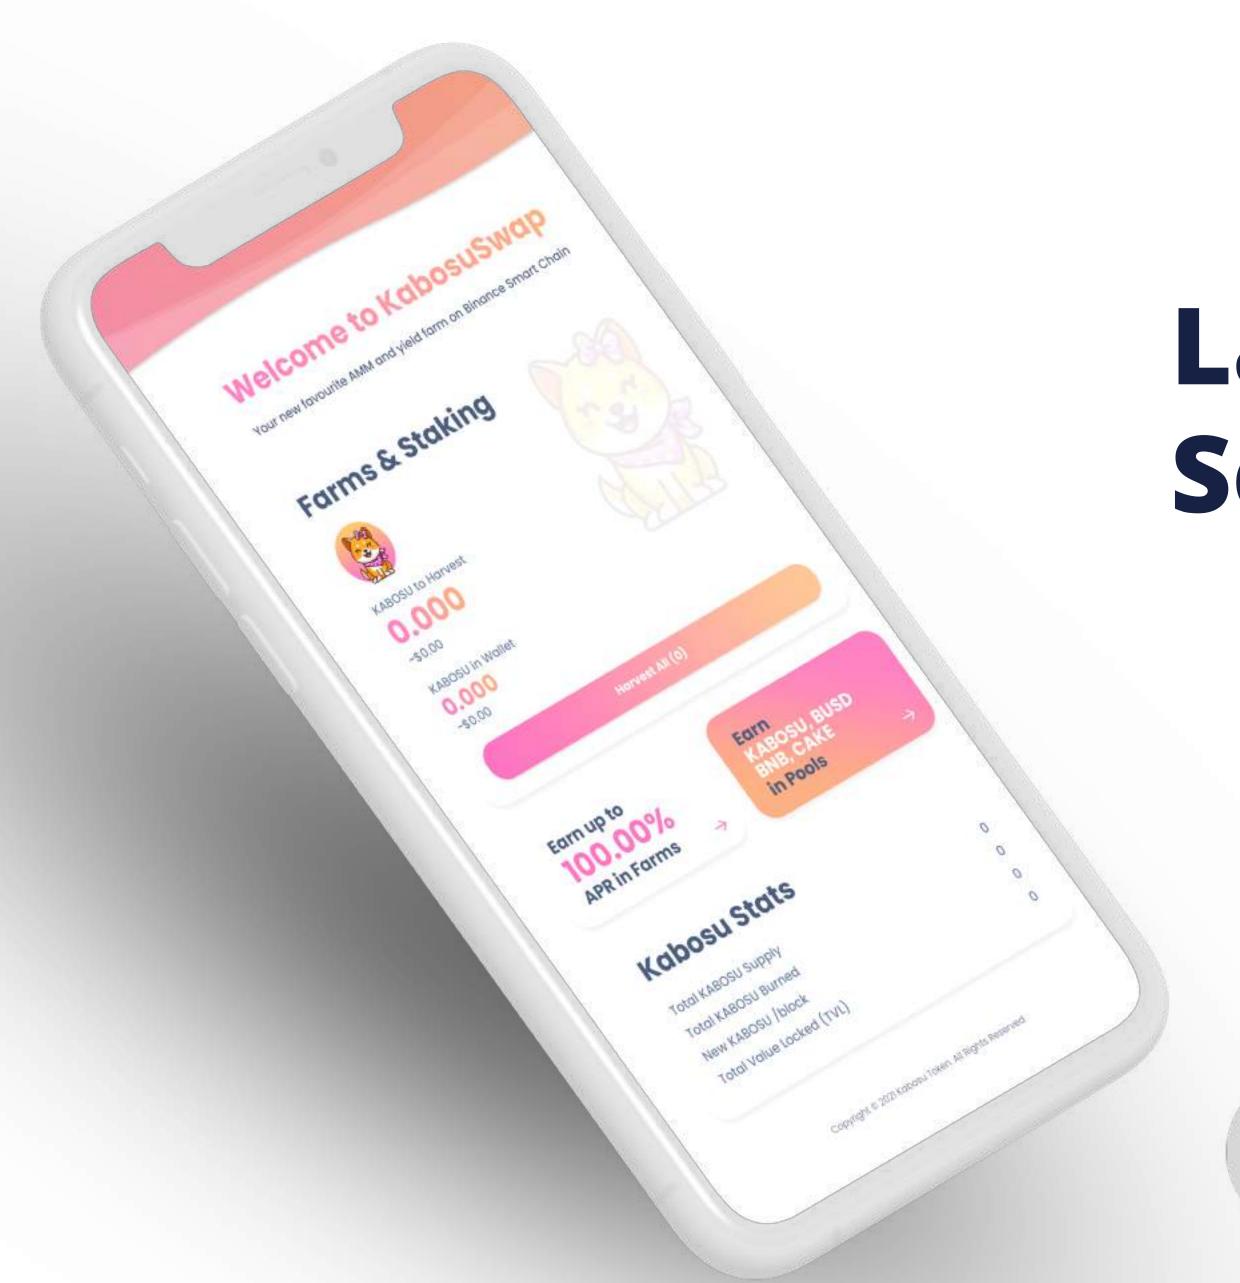

As announced with the release of Kabosu, charity is a big part of the project. We maintain the NFT auctions that will donate 50% of the profits to charity, as well as an open-sourced voluntary charity wallet, focusing on animal shelters.

Our Partners:

Tokenomics

Token type: Deflationary.

Transaction fee detail:
- 5% of all transactions redistributed to all holders of Kabosu
- 5% of all transactions redistributed to liquidity

Total Supply: 1 Quadrillion

Presale supply: 53%

Total Transaction fee: 10%

Presale hard cap 250 BNB

Launching
Soon...

Our Roadmap

Releases:
Kabosu (May 10th)

Listings:
- Kabosu on CoinMarketCap
- Kabosu on CoinGecko
- Kabosu on Centralized Exchange

PHASE.
01

Marketing:
- 1st round of Marketing Push (Various ads, social media presence, and more
- Influencer promotional material (Youtube, TikTok, and more)

Operations:
- Voluntary donation to community chosen charities
- Debuting development of internal Decentralized Exchange

Releases:

-Staking Mechanism

PHASE

02

Marketing:

- 2nd round of Marketing Push (Various ads, social media presence, and more
- Influencer promotional material (Youtube, TikTok, and more)

Listings:

- Additional Centralized Exchanges for Kabosu

Operations:

-Voluntary donation to community chosen charities
-Update on Decentralized Exchange development + potential Beta release
-Ecosystem update 1
-Debuting development of INU Wallet

Releases:

-Decentralized Exchange

Listings:

- Additional Centralized Exchanges for Kabosu

PHASE.

03

Marketing:

- 3rd round of Marketing Push (Various ads, Reddit, social media, and more)
- More Influencer promotional material
- Partnership Establishment

Operations:

-Voluntary donation to community chosen charities
-Debuting development of Staking Mechanism
-Ecosystem update 2
-Debuting development of INU Wallet
-Debuting development of ecosystem integral Token Bridge

Releases:

- INU ECOSYSTEM
- Wallet
- Token Bridge

Listings:

- Additional Centralized Exchanges for Kabosu

PHASE.

04

Marketing:

- 4th round of Marketing Push (Various ads, Reddit, social media, and more)
- More Influencer promotional material
- Partnership Establishment

Operations:

- Voluntary donation to community chosen charities
- Debuting development of NFT Marketplace
- Ecosystem update 3
- Decentralized Exchange Update 1
- Ecosystem integral Centralized Exchange development planning

Releases:

- Ecosystem integral Token INU
- NFT Marketplace
- TIER 1 Centralized Exchange application

Listings:

- Additional Centralized Exchanges for Kabosu

PHASE.

05

Marketing:

- 5th round of Marketing Push (Various ads, Reddit, social media, and more)
- More Influencer promotional material
- Partnership Establishment

Operations:

- Voluntary donation to community chosen charities
- NFT sales-related charity donations
- Debuting development of Centralized Exchange
- Centralized Exchange legal aspect handling
- Ecosystem update 4
- Decentralized Exchange Update 2
- Ecosystem integral Centralized Exchange development planning
