BSC comes with efficient <a href="#">native dual chain communication</a> ; Optimized for scaling high-performance dApps that require fast and smooth user experience.

# Bali Token is Using Binance Smart Chain (BSC)

## What is BSC?

Binance Smart Chain (BSC) is best described as a blockchain that runs in parallel to the Binance Chain. Unlike Binance Chain, BSC boasts smart contract functionality and compatibility with the Ethereum Virtual Machine (EVM).

## The Design Goal

The design goal here was to leave the high throughput of Binance Chain intact while introducing smart contracts into its ecosystem. Because BSC is EVM-compatible, it launched with support for the rich universe of Ethereum tools and DApps.

## For Users & Developers

In theory, this makes it easy for developers to port their projects over from Ethereum. For users, it means that applications like MetaMask can be easily configured to work with BSC. Seriously - it's just a matter of tweaking a couple of settings. Check out [Use MetaMask for Binance Smart Chain](#) to get started.

# Bali Token is Using Binance Smart Chain (BSC)

## FOR USERS

1. Send and receive BNB and other BEP2 tokens cross-chain.
2. Explore the transaction history and blocks on the chain, via bscscan, API and node RPC interfaces.
3. Stake your BNB to earn some block rewards

## FOR DEVELOPERS

1. Issue new tokens to digitalize assets
2. Migrate existing DApps
3. Run a full node to listen to and broadcast live updates on transactions, blocks, and consensus activities
4. Become a validator of BSC
5. Develop wallets and tools to help users use Dapps
