

Lockness

Protection ,
at your fingertips.

V2.0

The Lockness Payment Gateway

Lockness aims on providing a safe and secure spending environment for users within the crypto space.

For the first time; users can buy and sell goods and services on any platform at any time, under the protection of a P2P escrow system. The PayPal of crypto!

Protect yourself

As the popularity of crypto increases and block chain currency reigns in power, scams and fraudsters roam the network, increasing by a staggering 1000% within a one year span. As cryptocurrency begins to mature from infancy; measures must be taken in order to protect the end user in the most important sector known to the network, **Transactions**

Escrow crypto

Every transaction made through the crypto network is a risk of losing your funds to anyone on the receiving end. A bold solution Lockness aims to resolve is eliminating this risk in its entirety. Developing a secure gateway for escrow transactions; Available for P2P utility and businesses all around the world!

100,000,000+

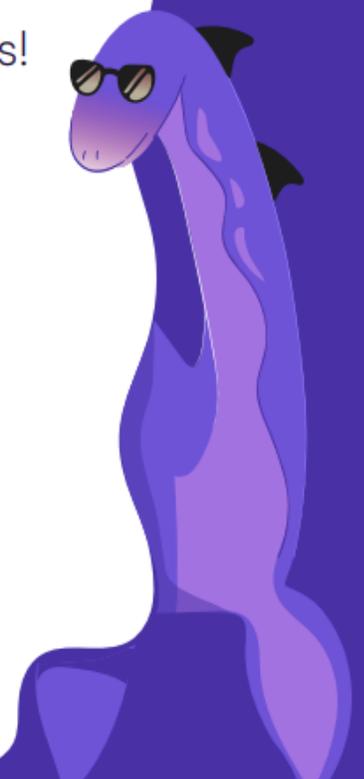

Users aplenty

As the moments pass by, millions of users will accept crypto as their preferred use of payments. Whether its simply trading or consumer purchases online, The number of users are climbing exponentially upward of the existing 100 million users.

Few target use cases

With our initial P2P platform ready for release the possible use cases are endless!

- Metaverse Economies
- GameFi Transactions
- NFT Marketplaces
- Escrow SAFT services
- Milestone Transactions for Services
- Online Marketplaces
- Builders, Freelancers & Gig Economy
- Real Estate and Property Sales
- Automotive, Aviation and Marine Sales
- Third-Party Managed Transactions
- OTC Escrow Services

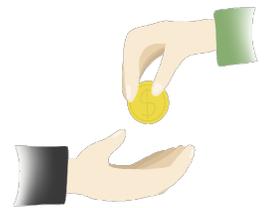

Introducing: The Lockness Token (LKN)

In conjunction with the launch of the Lockness escrow platform, We're excited to introduce the Lockness token (LKN). After the subsequent launch of the Lockness token followed closely by the transaction gateway, Users will have the opportunity to create transactions using 'LKN' tokens; which will allow users to receive rewards through every transaction performed, as well as payee's receiving a deducted 0.5% from the initial seller fees. Alternatively, users have the option to create transactions using BEP20 tokens of their choice, minus the potential rewards.

The Lockness token (LKN) upon release; will have utilities including:

- **the ability to claim discounted fees upon the seller**
- **the ability to reward buyers with a percentage reflection of each transaction**
- **the ability to utilise (LKN) as a form or medium of accepted currency**
- **Integration within our transaction based liquidity pool**

Seller charged 1.5%
= 0.5% Liquidity
0.25% Burn
0.75% Admin Fee

In the future, the LKN token will have additional utilities including:

- **Staking and farming integration**
- **A payment medium as a part of the yet to release; Lockness NFC payments**
- **Usage of Lockness wallet utility**

We're designing our Lockness token infrastructure around the utilities of our payment gateways, This will ensure a 'double benefit' system; ensuring the price of the token as well as the stability of the platform has been reached.

As the community continues to grow, and the use case of the Lockness platform is brought to the attention of the many crypto users, Our platform will increase to grow in volume and size. Every transaction made through the Lockness platform indirectly contributes to the structure of the LKN token. A percentage of the seller fees associated with every transaction; are split up into sectors, These include liquidity and burn contributors. As time passes and volume increases, The Lockness token will indefinitely increase in value.

We have a dream!

As Lockness ventures into the blockchain space, there are a plethora of solutions to develop and explore. As Metaverse economies begin to thrive and cryptocurrency becomes widely adopted across most use cases. Our solutions to the modern world are developed with the User in mind. Allowing affordable, easy and seamless transactions to blend in with your everyday life, Paving the way to mass crypto adoption on a global scale.

SDK Release

With the SDK release arriving shortly, businesses will be able to integrate secure crypto escrow services within their existing e-commerce interface.

- Conveniently integrate Lockness escrow services with any business site or application.
- Low flat rate fee to businesses of 0.5% per transaction.
- Plug & Play model

Tap&Pay

Businesses can finally accept crypto through our uniquely developed POS system.

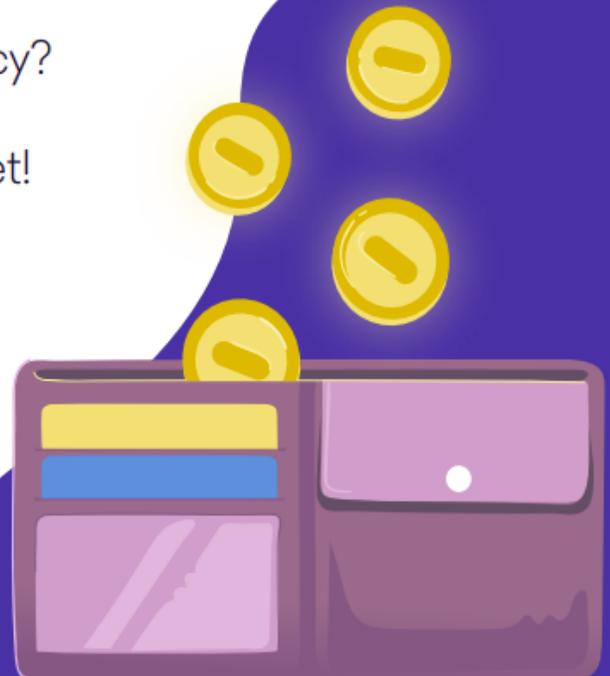

- Tap & Pay crypto payments without any extra third party hardware.
- Seamless, convenient crypto payments.
- Use any NFC enabled device such as your smartphone to create OTC (POS) Payments. Driving crypto adoption for businesses around the world.

Lock Swap

Tired of swapping your unwanted currency? With Lockswap you can choose your preferred currency before it hits your wallet!

- Automated swap for all currency arriving into wallet.
- No more questions about accepted currency!
- Solution to wallet fluff
- Bridging network compatible

The Lockness team is driven to develop a financial platform where your interests are our top priority.

1

Assurance is a necessity, Not a leisure

Is security important to you? We know everyone loves the feeling of security in their everyday life, so why should crypto be different? We've designed our escrow payment application to work alongside users existing wallets, all funds sent and received will land in exactly the same place they originated, Now there's no need to fumble 10 different wallets to use a single application.

E-Commerce = Escrow commerce

We're making it easier for business to go about their activity whilst remaining safe throughout every transaction made. During the set release of our V2 platform late 2021, SDK integration will allow business owners to seamlessly link the Lockness payment gateway within the convenience of their existing e-commerce site. Business transactions will also endure a 0.5% Discounted seller fee during every transaction made.

2

Payments Unprotected, Nobody Wins

Generally payment made through crypto undergo the heavy risk of losing it all. Transactions based through the crypto network are subject to anonymity and decentralisation, which for the most part is good. The ultimate downside is a potential scammer on the other end.

Escrow is the new go!

Through our newly developed payment gateway, Transactions made through the crypto network are protected through the use of an escrow payment method. Lockness; may be considered as the 'middle man' between transactions to ensure both the buyer and seller are protected, and the agreement initiated is upheld, every step of the way.

3

Get paid while you spend

As if spending your hard earned funds didn't feel bad enough. Were lifting the typical agenda behind spending money. Lockness is providing each and ever user the opportunity to claim rewards for every amount spent. Just one of the ways the seller fees are broken up and distributed to benefit the system as a whole.

The Bigger picture!

Major corporate payment gateways will charge a percentage of every transaction made, and keep the collective amount to benefit themselves. Moreover; our objective is to benefit the entire Lockness ecosystem through the fees charged to the seller. Burn and liquidity lock mechanism are in built automatically within the payment process to build upon the tokenomics of the LKN token. Creating a deflationary token system as a result.

Why make the switch?

With ease of use and adoption in mind, here are a few points to consider!

- DeFi escrow payments.
- Send Crypto by simply entering an email address, No more wallet addresses!
- Connect existing Metamask or Trust wallet
- Sign up in less than 30 seconds
- Sender remains fee free
- Recipient retains low 1% flat fee
- Recipient does not require an account to accept escrow funds
- Releasing on IOS, Android and the Web.

3

Get paid while you spend

As if spending your hard earned funds didn't feel bad enough. Were lifting the typical agenda behind spending money. Lockness is providing each and ever user the opportunity to claim rewards for every amount spent. Just one of the ways the seller fees are broken up and distributed to benefit the system as a whole.

The Bigger picture!

Major corporate payment gateways will charge a percentage of every transaction made, and keep the collective amount to benefit themselves. Moreover; our objective is to benefit the entire lockness ecosystem through the fees charged to the seller. Burn and liquidity lock mechanism are in built automatically within the payment process to build upon the tokenomics of the LKN token. Creating a deflationary token system as a result.

An important factor to keep in mind is the exclusivity the Lockness platform provides. Of the numerous payment options to explore within the crypto space, Lockness remains the only payment gateway to utilise escrow functions and provide safe, easy and secure payment options for users. Staying protected is important to every user, which is why Lockness has been deemed quite necessary to the crypto space as a whole. As the Lockness ecosystem expands, we aim to broaden the spectrum in developing solutions to the greatest issues the crypto ecosystem faces today.

These may include:

- Wallet security issues.
 - Inefficiency of P2P payments.
 - Inefficiency and difficulty of multiple currency swaps.
- And the list goes on. Lockness isn't just a payment gateway. Its a team seeking to revolutionise the crypto space, whilst thinking outside the box.

Let's Get Into the Tech

“Our platform will present an innovative gateway for crypto payments all around the world. Through harnessing the power of smart contracts, Lockness will be capable of creating custom escrow payment solutions through developing secure smart contracts for every transaction made. As a result of all this, we intend to significantly reduce the rate of scams and fraud spreading through the crypto space; as well as mitigating a connection between businesses of the real world with consumers within the block chain ecosystem. As a result; maintaining the growth and safety of the community as whole.”

Malik Sukkarieh — CEO and Founder

Development, Fast tracked

Development is moving at an extremely rapid pace. From payment gateways to secure wallet applications. We're disrupting the crypto market through creating the latest and greatest solutions to the issues we face day to day within the crypto ecosystem. Our Payment gateway BETA SDK is set to release alongside our native token, Both elements work together to support each other. Our very own Lockness wallet as well as NFC POS integration will be available for businesses and well as P2P users to utilise in the coming months.

Q2

2021

Q2-2021

- Project conception by Malik Sukkarieh
- Initial team assembled
- Research and Development
- Planning and Logistics
- Version 1 of Whitepaper released
- Public announcement
- Improve Marketing strategies
- Hire solidity gateway developers
- Payment gateway planning

Q3 - Q4

Q3-2021

- Lockness Private sale
- White paper Version 2 release
- Tokenomics Update and revision
- Develop solidity platform contract
- Develop Lockness platform UI
- Lockness gateway Test-net deploy
- Develop NFT collectables

Q4-2021

- Lockness Application Launch on IOS & Android
- Lockness Main-net deployment
- Pre-sale IDO
- DEX listing
- Begin Lockness API Development
- SDK integration within Metaverse economies
- SDK integration with Partnered GameFi Projects
- Begin Lockness wallet development
- Expand market reach
- Market traction for e-commerce
- SDK Model
- Improve business model / Self Analysis
- Analyse and improve marketing strategies
- Commence NFT platform development

2022

2022

- Multiple network bridges to support top 20 coins
- Lock wallet release
- Release SDK Application
- Release API integration
- Release Lockness to CEX
- Release NFC POS application

Extra measures

Nothing is more important to us than security. To ensure your funds as well as the project reserve funds are safe. Lockness has taken all measures into account in order to assure the risks of stolen funds have been eliminated. As a result, funds held within the Lockness reserves will be stored within the cold wallet storage system; in order to retain long term security measures for the platform as well as the token.

As an extra precaution taken toward any catastrophic events that may occur, Lockness is to employ white hat penetration testers; to ensure the stability and security of our internal systems.

We work for you

The foundation of the crypto space is indefinitely its community, without the support of the many users around the world, crypto would not be where it is at this point. Protecting the community is by far the biggest concern crippling the crypto space. Millions of funds have been stolen as a result of Fraud or scams lurking the ecosystem. The Lockness escrow system will surely improve the trust system that currently exists and drive the unwanted attention back into the depths.

Escrow your crypto

In order to protect our users through the Lockness payment gateway, we must create steps in order to ensure the process carries out its purpose. Users who deploy an escrow transaction will be subject to a withholding period of their choice, during this time funds are withheld until the item has been delivered. Once the item is delivered and the product is approved by the buyer, only then will funds release to the seller. Safe and Sound.

Compliance is the best policy

Working together is a part of our business we do not take lightly. Government regulations and Lockness work together to create a harmonious environment and stability within the Lockness community. We will be working closely with major E-commerce businesses and encourage all participants to view the stringent auditing and KYC measures taken to assure our legitimacy.

Fees that work for you

The Lockness business model is constructed with fair fees to the seller in order to allow them to remain sustainable, Buyers on the other hand remain free as an encouragement to use our platform and to stay safer when making crypto payments online. For the first time, Lockness has developed their fees to benefit you, the user. Fees retracted from the seller are distributed proportionately to benefit the system I.e a portion becomes buyer incentive reward, liquidity contribution, burn etc.

Lockness Payment Flexibility

We understand everyone's situation is different. You might be a Retail businessman, Software developer or maybe just the average Joe making a purchase! Keeping this in mind; we've developed our system to revolve around you, delivering flexible payment methods for most use cases.

We've broken our payment system down into 2 flexible payment methods.

Direct P2P Payments

This is the foundation of Lockness itself. Our simple yet effective method of capturing safety through every transaction is through our innovative development of our payment process. Direct payments create a layer of protection for every transaction made, Ensuring your money is safe through any circumstance that may arise.

Our Direct payment system allows customers to purchase items no matter where it may be, Online or real time. As the customer has paid for an item, those funds are held in escrow. This means funds cannot be accessed until customer approval. As the customer receives and verifies the product, the funds are approved and sent through to the seller instantly! As a result; the Buyer is satisfied with his product; and the seller has secured his funds. Protection; at your fingertips.

Milestone Payments

Everyone wants to be in control of their money, But what if you could **really** be in control? Delivering a service online isn't easy, Whether its developing a website or simply hiring a moderator online, Payments can get really complicated.

First; there's the issue of remembering when to pay the funds, and second; **how much do we owe them again? I forget...**

With the option of milestone payments, Funds are held in escrow and distributed at any scheduled time. Whether its next Tuesday or an ongoing payment each week, Lockness provides the flexibility you need to keep moving forward with your day. **Leaving you in control of your crypto.**

What if the customer forgets to approve the item after receiving it?

All measures are taken in order to ensure smooth sailing for all of our clients. That's why we've integrated a fail safe duration. Essentially; upon requesting a transaction, it is mandatory to fill in the maximum amount of wait time until a transaction must go through. So no matter how long you wait; the payment is programmed to go through at the fail safe time that has been approved by both parties. **See, no stress!**

Lockness Token Economics

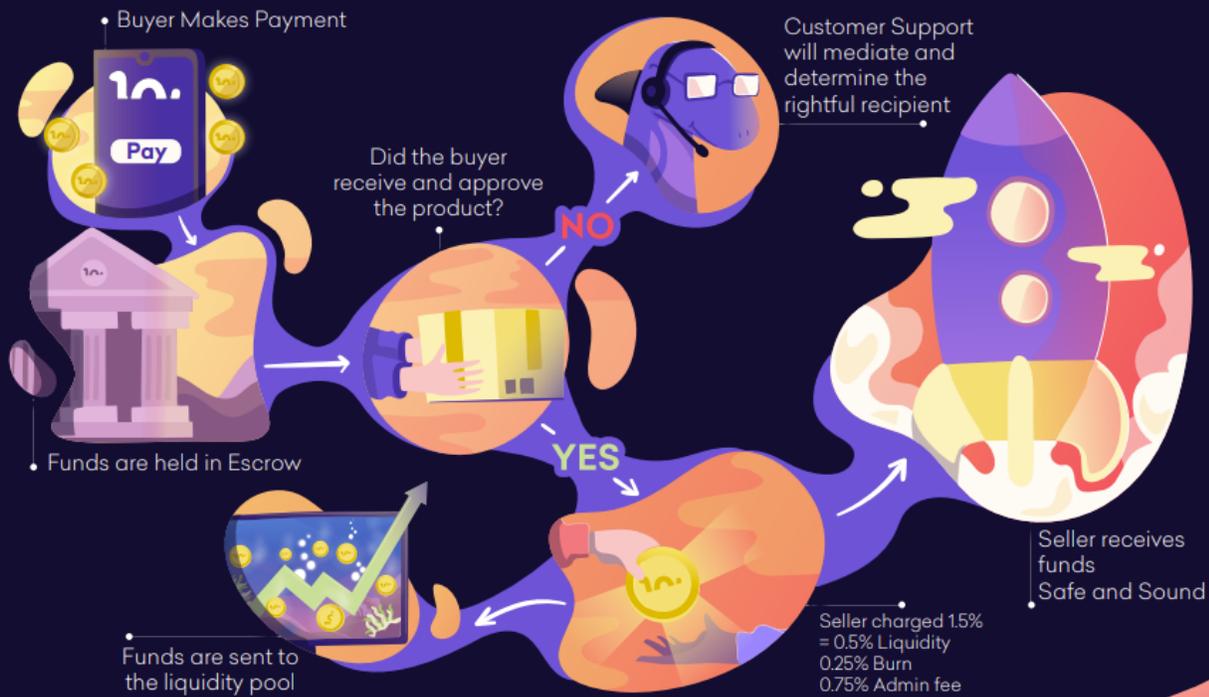

We're developing the Lockness payment gateway to allow users to seamlessly spend their crypto through every transaction; under the protection of a protective escrow system. The transactions may incorporate the use of 'BEP20' tokens as well as the native Lockness (LKN) token. As development broadens, network bridges will be made to support many more crypto networks, such as ERC20 based tokens etc.

A Lockness transaction starts its life in the hands of the buyer. A simple crypto transaction is created which will immediately generate a smart contract; tailor made to the nature of the transaction. As the funds are withheld and secured within the Lockness holdings; the buyer at this time has the opportunity to view his service or item received; before approving it and allowing funds to finally pass through to the seller.

Want to know what happens if the item isn't received as promised? Good question!

During the Withholding period, there may arise the circumstance where the buyer has received a faulty product, or in fact nothing at all. This is where we come in! Lockness will be notified of the disputed case and recognise the party at fault, before providing a full refund to the rightful recipient. In turn protecting both the Payer and Payee during any given crypto transaction. Simple, Fast and Safe!

No its not magic. Here's how it works!

Our unique payment gateway will allow users to finally shop and pay others online with the added peace of mind of safety security and assurance. The Lockness gateway will open up many opportunities for businesses to grow within the ecosystem as well as Improving the infrastructure behind Direct P2P payments. As a result; paving the way to mass crypto adoption for all! This is a much needed necessity for the crypto space and a deterrent for scammers online who seek to take the funds of unsuspecting crowds.

OK, But do you really need a native token?

Yes; in fact we do! This is not only for the purpose of benefiting the project as a whole, developing a native token alongside our payment services will also benefit you; the user. With the upcoming release of utility applications; such as Lockness wallet and NFC Tap&Go payments, compatibility with our token will allow us to incorporate features, not possible when using other available networks.

Lets run through the cycle of our token. As a transaction leads towards its ending stages; the seller will incur a small fee as a total percentage of the transaction made. This fee is promptly broken down into multiple parts, incorporating an automatic burn and liquidity function. The percentage of the tokens that are sent to burn will increase the scarcity of the token hence an increase in token price, and the portion of \$LKN tokens that are sent to liquidity will create stability within the token itself.

Stringent Auditing

Determining the rightful owner of funds during a disputed transaction is no easy task, that's why we investigate through fact checking processes and evidence based opinions to ensure every decision made; is the right one.

DeFi at its finest

Lockness is; and always will be decentralised The only access of funds available is during the dispute process, Where funds in escrow are designated to the rightful recipient.

Escrow for everyone

Everyone has the right to feel safe about their funds. So were making Lockness available to everyone, no matter the where in the world you reside.

*Any excess tokens will be burned after the token sale.

**At launch, there will be 1 Billion tokens (or slightly less as any tokens not sold will be burned). We are selling 25% of the tokens (260 million) between the private sale and public sale, and will distribute tokens shortly after the close of the public sale.

An important mention to note is the vesting period that comes along with every ICO & IDO token purchase. These private fund rounds both encounter a vesting period in order to prevent the possibility of a mass sell off at launch, in order to protect the investments of the people and the stability of the token, Lockness has incorporated these vesting periods exclusive to both the Private sale and Pre sale funding rounds. Please check the detailed tokenomics charts to view which vesting period may apply to you.

If one may choose to invest in different Pre sale rounds, Vesting periods apply to each separate investment for both rounds. This means you may experience different vesting criteria for both separate investments.

Token Economics: Token Allocation

Our Mission

Block chain; Revolutionised

The Lockness Payment Gateway is a a long term mission, In order to achieve the end goal we require a crowd-sale as a small factor to contributing towards the success of the Lockness platform. Lockness is not an extension of the current payment wallet to wallet system we currently use today, But rather a complete replacement. Our goal is to adopt 70% of payments made on the block chain to pass through the Lockness platform by the year 2025, or sooner! Similar to the traditional banking system still alive and well today, PayPal secure transactions have paved the way for a safer online consumer environment, and slowly transitioned the e-commerce by replacing traditional bank transfers with their safer, easier alternative. In the same way, Lockness will revolutionise the payment system on the block chain as we know it!

Each and every team member plays a crucial role in developing the future for crypto. With our extensive research and over 40 years of collective core team member experience in block-chain and communications, rest assured our team delivers only the best in quality and exceptional end user content.

Executive Team

The Backbone!

Our team has worked hard throughout their experiences in the technology field; to deliver only the greatest and innovative solutions to the block chain ecosystem. Collectively throughout the 40 years of experience within the block chain sector, we've built communities from the ground up, Working alongside major brands to innovate, market and redevelop the business structure and foundations of a project.
