

SWASS is a "store-of-wealth" token that is 100% community driven, and built on "deflationary tokenomics". It has locked liquidity for 80 years, and publically renounced ownership of the contract.

SWASS incentivizes both investors, and advertisers through a (DApp) portfolio management platform, and engaging advertisement portal. The platform that we build will provide any user with advanced portfolio management tools such as; price analysis, risk assessment, customizable UI, tracking of wallets, transaction history, launch progress, & more. In addition, "higher-tier" DApp features will be accessible when the connected wallet holds a minimum balance of SWASS.

SWASS is building the next major DEX tool to be used by the BSC marketplace.

ABOUT US

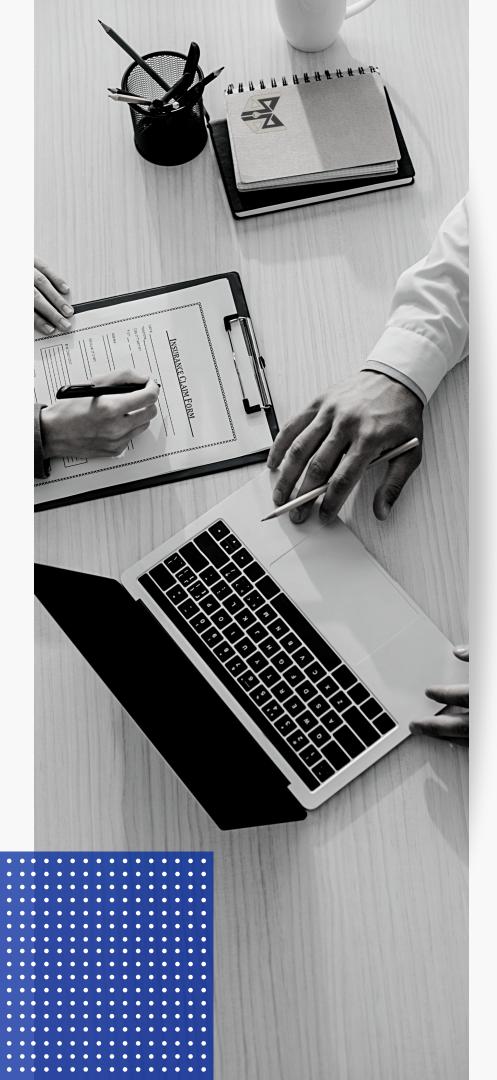

SWASS is backed by a dedicated team of professionals who have 20+ years of experience operating businesses, developing software, and bringing products to market. The members of the team have specialized in algorithmic trading tools, machine learning, SEO, financial products, & DeFi ecosystems.

At SWASS, we are exceptionally proud of the community that is being built surrounding our token. We work to provide engagement through our social media pages, as well as timely announcements, and transparency as the company develops.

The result of which, is an honest and progress-driven token, backed by our biggest supports and believers in the DApp project. We encourage anyone who believes in our use case or tokenomics, to please volunteer in getting the word out about SWASS!

In the future we hope to integrate the power of the community in deciding if excess funds will be spent on marketing budgets, for yield farming integration, random NFT generation, token burns, etc.

USE CASE

SUMMARY

The SWASS ecosystem is built on an aggressive "store of wealth" and "yield tokenomics" model, which benefits every long term holder with passive income. Every transaction is subject to a 5% tax re-distributed to existing holders, and a 5% tax given back to the liquidity pool.

In addition, SWASS developers are creating a suite of products that will provide high-grade portfolio management, and charting tools on our Decentralized App (DApp).

Access to this will be based on a minimum balance of SWASS tokens held (in an individuals' wallet), although anyone can still access basic features on our website swass.finance.

For holders of SWASS, the DApp acts as a 2nd layer incentive for adding liquidity, as well as a product that they can use to search other cryptocurrencies, and more easily manage their portfolio.

Our developers are committed to improving the DApp experience for larger holders of SWASS, and expanding the applications of the SWASS token in the future.

ROAD MAP

PHASE 1

INITIAL LAUNCH (COMPLETE)

SWASS was successfully launched on May 3rd, 2021 with a 10% transactional fee, which took 5% of buys/sells and redistributed them to existing holders, while the other 5% was sent directly to the Liquidity Pool (LP).

10% of the original supply is in the developers fund for future marketing campaigns.

RENOUNCED CONTRACT (COMPLETE)

SWASS renounced ownership of the contract, by locking 90% of tokens in the liquidity pool until the year 2099.

This demonstrates to the community that they can trust in the developers, and the long term viability of the project, as new applications are added to the token.

AUDIT

We are actively seeking a TechRate audit of the SWASS smart contract code, which we will make publicly available on our GitHub, and our website.

You can also see our BSC contract and token data, and our locked liquidity contract on there as well.

PHASE 2

MARKETING INITIATIVE

The developers have dedicated an initial \$30,000 marketing budget to lay the foundation for community incentives and social impact over the first sixty (60) days.

The future marketing budget will be decided by periodic, community voting, which will determine where excess funds will come from once the 60 days are over.

We currently have active social media campaigns in place for Telegram, Discord, Twitter, Facebook, Reddit, Tiktok, Instagram, etc. Our goal is to reward SWASS community engagement!

We plan to list or are actively seeking listing the following:

- Blockfolio
- Coinmarketcap
- Coingecko
- Coinhunt
- Poocoin
- Dextools
- Bogged Finance

ROAD MAP

PHASE 3

DECENTRALIZED APPLICATION (DAPP)

SWASS developers will launch <u>app.swass.finance</u>, which will give holders utility by unlocking premium features based on your SWASS wallet balance.

Token holders will have the ability to interact with the main features of our SWASS Decentralized App (DApp) which will greatly improve portfolio management. The features are:

- DApp iPortfolio mangement indicators
- Wallet connection with data pulling data from web3 integration.
- BSCscan API connection w/ data pull.
- USD value conversions for any token balances.
- "Price floor evaluator" (algorithmic trading tool using BSCscan).
- Bitquery API calls for data.

UTILITY OF SWASS TOKEN

To further incentivize holders, we will be upgrading these features and integrating them into other applications that will use the SWASS token

PHASE 4

NEXT STEPS

In this phase the core team will be focused on the following:

- AMA's
- Exchange listings
- NFT Development
- DApp and Second Layer Development

FUTURE PARTNERSHIPS

- Yield farming or Pool integration with SWASS token
- Major exchange listings (to be decided by community)

FUTUREINTEGRATIONS

DApp

- DApp iPortfolio mangement tools and indicators directly on app.
- Wallet connection with data pull web3 integration.
- BSCscan api connection w/ data pull.
- USD value converting for any token balances.
- Price floor evaluator (my algo using BSCscan).
- Bitquery api calls for data.

Use case NFT's

- Swass token burns will generate random NFT's.
- Rare NFTS will act as second layer access to the DApp's and advertisement portals.

Features to be Built into DApp

- Asset management tools with tracking and history
- Risk management tools and scoring system
- DApp access levels will be a 2nd layer holding mechanism for SWASS
- Newly launched token progress and grading tools
- Advertisement platform that will also be a 2nd layer holding mechanism for SWASS token.
- Random NFT generation with use case based on burning SWASS.
- NFT market place to buy and sell

TOKENOMICS

SUMMARY

SUMMARY

INITIAL SUPPLY 10,000,000,000,000 **SWASS**

BURN WALLET

280,000,000,000,000 SWASS

MARKETING WALLET

900,000,000,000 SWASS

CIRCULATING SUPPLY

9,720,000,000,000,000 SWASS

PER TRANSACTION:

- 5% Redistribution to holders
- 5% To liquidity pool

Dead wallets and marketing wallet are receivers of reflection.

YIELD FARMING - AUTOSTAKING

- Auto staking mechanism directly on wallet (Metamask/ Trust).
- 5% taken from every transaction and divided amongst holders of SWASS.
- 5% taken from every transaction and returned to the liquidity pool.
- Community vote on yield farming integration and partnerships
