Knowing KaiECO

KaiECO is a short term for Kai Ecosystem. Kai Ecosystem is a project that aims to provide different platforms for crypto investors and enthusiasts who have different interest. KaiECO and KaiDHT are the two tokens that will power the entire ecosystem. These two tokens will bring investors to what they love most in the crypto world whether auto-earning by farming and staking or by collecting and minting NFTs or even just playing for fun or playing high definition games to earn.

About KaiECO

Mission

01

Presents an opportunity to token holders to transact digital assets across the digital market.

02

Lower the barrier for entry to a more advanced financial system

03

Introduces everyone to the world of decentralization

04

Provides awareness to the immeasurable usages of digital assets

The Problem

Most meme tokens remain as meme tokens only, without any usage nor contribution to the community. Some were just hyped by celebrities and prominent personalities without any real-life developments. Thus, leaving most of the investors losing their capital without any returns in any form.

Our Solution

KaiECO tokens (kaiECO and kaiDHT) were developed for the sole purpose of becoming the base token for the Kai Ecosystem. This Kai Ecosystem is unique and fun having cool environment where users can have a chance to interact with or against each other through betting in our tournaments. Users can farm tokens, earn rewards through staking, take care and breed puppies and sell them or play games against each other. Culture will be built and friendship will blossom...in Kai Ecosystem

KaiECO | KaiDHT Tokens

\$KAI**ECO** and \$KAI**DHT** are community driven, defi tokens. Their prices are controlled entirely by the community. These two tokens have multiple functions throughout the ecosystem of the project. Hand in hand, these two tokens will bring investors to what they love most in the crypto world whether auto-earning by farming and staking or by collecting and minting NFTs or even just playing for fun or playing to earn high definition games.

The tokens will be supported on both binance smart chain (**BSC**) or ethereum (**Eth**) networks.

KaiECO Token Features

6% of every buy, transfer and sell transaction is redistributed to every eligible holders. These will be in the form of BUSD for BSC network and USDT on ETH network. The larger the bags, the bigger the rewards are expected.

4% of every buy, transfer and sell transaction is moved to liquidity pool. This is to maintain the trading and there will always be liquidity in the pool.

3% of every transaction is taken and converted to BNB or ETH and is stored in the contract. When the buyback is triggered, the contract buys kaiECO and sends them to burn address. Thus, removing those tokens from the circulation.

KaiDHT Token Features

This token is a utility token and is used for trading game utilities, weapons, and some game items. This token is also very limited so no burning and reduction of supply is applied.

8% of every buy, transfer and sell transaction is moved to liquidity pool. This is to maintain the trading and there will always be liquidity in the pool.

2% of every transaction is moved to marketing fund to fund the marketing activities of the team. This helps spread awareness of the project.

The KaiECO Usegraphic

Staking

Stake your tokens to earn more tokens as rewards

Games

Play to earn and win more tokens and prizes. Three games are initially and currently being developed. More games to come.

NFT Marketplace

Mint your own NFTs and sell them through the marketplace. You can also create your own collections.

Future TBA

More use cases will be announced in the future.

The Kai**GAMES**

Kai **LEGENDS** - a single role playing game

Kai **PUPPIES** - a team player game

Kai **FIGHT** - a pvp game

The KaiGAME Series

GAME
01

KAI LEGENDS

Play the game of Kai as he journey for greatness.

GAME
02

KAI PUPPIES

Breed, battle or trade crypto puppies.

GAME
03

KAI FIGHT

Fight with each player and win his tokens.

Be Smart And Join KaiECO

01. Small Cap | Big Potential

KaiECO project is still in its infancy so it still has low marketcap but the tokens' usage is so much bigger than other tokens having huge marketcaps.

02. Rewarding

Investor can earn BUSD or USDT just by holding tokens. For each transaction, 6% is converted to BUSD or USDT then distributed to holders in relation to their bag size.

03. Utilization

KaiECO tokens (KaiECO and KaiDHT) will be fully utilized in the Kai Ecosystem. As time goes by, KaiECO supply will decrease while the demand increases.

04. Buy Back Mechanism

KaiECO tokens has a buy back tool that when triggered, the contract will auto-buy tokens and sends those tokens to burn address.
