INTRODUCTION

A new model of E-commerce

The concept of crypto currencies was developed and democratized across the world with the launch of Bitcoin in 2009. It is said that an individual or a group of people behind the pseudonym of Satoshi Nakamoto would be behind the Blockchain technology. Since then, many virtual currencies have invaded the market with varying degrees of success. To stand out, a currency must be backed by an innovative trade.

Faced with this observation, Pascal Groult and the founding members of SiXyeS have developed a new model of E-Commerce that will revolutionize the world of international trade by facilitating multi-currency and multi-transaction transactions between countries.

SiXyeS is an international trading platform where professionals and individuals can easily sell or buy in Euros, dollars, HeptaFranc, the virtual currency associated with the model, in various other Crypto currencies, or even hiding goods and services. The exchanges are optimized, thanks to the international coverage of SiXyeS and the six different types of sales offered on the platform (direct, trading, highest bidder, candle, barter or shared) and the value regulator function of HeptaFranc.

In addition to facilitating and optimizing your commercial exchanges, SiXyeS is an innovative concept that allows everyone to trade with everyday products and services. The platform offers you the possibility of trading on new or used products. Services of everyday life. You can very simply sell or buy services, products, intellectual services, while speculating.

HeptaFranc is a Crypto currency that aims to become the main trading currency on SiXyeS and, thus, to de-regulate the value of international trade. The operation of the platform is governed by a system of rewards, which allows buyers and sellers to obtain HeptaFranc for each of their transactions. The two main virtues of this reward system are a significant volume of exchange and a rate of higher customer loyalty. This is a place of trading, buying and rewarding.

The entire SiXyeS team invites you to read the following pages to learn more about our concept.

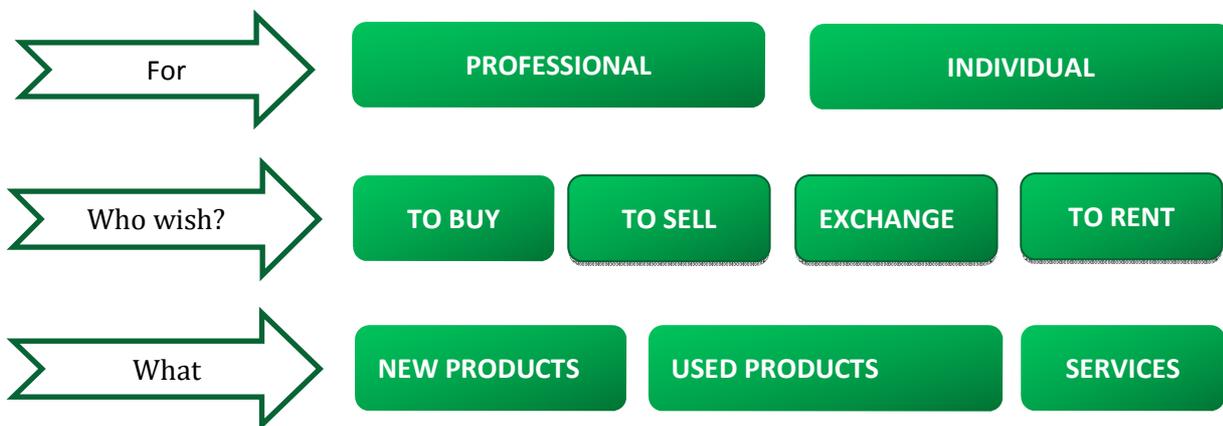

1. THE GENERAL DESCRIPTION OF THE MODEL

1.1. The SiXyeS Platform

SiXyeS is an e-commerce platform that proposes to optimize exchanges on the international market. To do this, it provides its customers with powerful and innovative tools that allow, in particular, trading with all types of goods and services.

1.1.1. The description of the e-commerce platform

SiXyeS is an international exchange platform:

The platform offers classic ads categories on this type of e-commerce but also more innovative categories such as cotransport of equipment and goods or the destocking of all types of goods. Emphasis has been placed in several sections on virtual and augmented reality, which for us is a market with strong development potential in the coming years.

All the categories of ads will not be accessible at the start of the activity of the platform. We present you below, in green, the categories available at the opening and in orange those which will be accessible.

The SiXyeS team reserves the right to modify them at any time to meet the needs of the market.

1.1.2. The functionalities of the e-commerce

The SiXyeS platform offers different functionalities, simple to use, to sell faster and at the right price.

+ *Differents Payment method*

With SiXyeS you can easily choose one or the other or a combination of the different payment method shown below:

The costs (transport, delivery, customs ...) are the responsibility of the buyer and should be paid, in a first time, in currency.

+ *Six different types of sale.*

SiXyeS offers six types of sales with each their specificities. For each of your exchanges, you can easily opt for one of the systems, presented below, to optimize your sale.

Direct Selling

This is a distribution mode without intermediaries. Manufacturers, service providers and private individuals set their prices and themselves carry out sales activities with consumers.

The main advantages are the reappropriation of margins and the control of the distribution and its image.

SiXyeS offers you the opportunity to sell online in an ultra-secure way, thanks to the mandatory authentication by a KYC system provided by a company external to the organization. This obligation is valid for all activities of the platform.

The Negotiation

Negotiation is the art of dealing with a commercial exchange by discussing the terms of the arrangement in order to reach a satisfactory agreement for all parties.

The main advantage of trading is to speed up sales and purchasing processes with a price that can be adjusted directly to the demand. The seller can freely choose the purchaser according to the criteria that are specific to him, such as the price, the proximity geography, or the deadlines...

Thanks to SiXyeS you can negotiate simultaneously with several potential buyers and opt for the transaction that is most favorable to you. Your exchanges are optimized by the easy-to-use features of the platform, such as its instant messaging.

Sale to the highest bidder

Also known as an auction, it consists of selling to the person or organization that offers the highest price. It traditionally takes place in a sales room, but is nowadays mainly on the Internet.

The sale to the highest bidder is particularly suitable for the sale of rare, atypical, or high value products. Making it available on the Internet makes it possible to reach buyers all over the world and thus to multiply its chances of selling quickly.

With SiXyeS you do not pay a commission if the product is not sold (unlike an auctioneer) and you reach a wide audience. The seller can freely and easily secure its sale by fixing its starting price and its floor price.

The reverse sale

It is also called a candle or candle sale. With this type of sale, the starting price gradually falls for a given time (historically, the time that two candles go out). The first buyer who accepts a prize wins the sale.

The main advantage of this type of sale is that you can sell very quickly thanks to the possibility for the buyer to obtain an attractive price. However, you may sell for less than you want because the auction price is set by the auctioneer.

Our trading platform allows you to have control over all the parameters of your candle sale; you choose freely and easily the setting of your countdown. The seller may also choose to be present during the course of his sale and decide to stop the sale before the end of the time initially set (after a previously defined time).

The barter

Said also the Salt, it consists of exchanging a product or a service against another product or service. Bartering is part of the current trend of responsible consumption.

The main advantage of bartering is to satisfy a need or desire without having to pay. The disadvantage is that this exchange is not made with respect to the real value of the product but according to a specific psychological value to each.

HeptaFranc aims to regulate the value of products and services sold on SiXyeS. You can sell all over the world with the same currency. Our virtual currency can also be used for all other types of sales of our platform.

The shared selling

It is also called the sale by share and consists of selling a good or a service of the everyday life to several people simultaneously. The purchasers divide the use of the good or the service.

Shared selling is particularly suitable for real estate or requiring a major investment such as vehicles or professional equipment. This type of purchase or sale can also be used for small tools or any type of equipment.

Shared selling is also recommended for many services, for example, for the organization of group lessons. The service provider can freely set the numbers, minimum and maximum, of participants in his course.

SiXyeS offers easy-to-use tools for managing shared sales and purchases for many types of goods and services. In particular, the seller is provided with standard condominium contracts and usage planning tools. The sale will be validated only if the criteria defined by the seller are respected (minimum and maximum number of buyers, adjustment of the selling price according to the number of participants in the sale ...).

+ **Secure transactions**

- + The SiXyeS team has worked to secure its platform and transactions. The first security implemented is mandatory authentication for any seller account creation.
- + This authentication is performed by a KYC process performed by an external service provider. This procedure is usually used by financial institutions that must identify their client with certainty in accordance with national and international regulations.
- + This is, above all, to prevent identity theft, tax evasion, money laundering and all hidden financing. This process also has the advantage of being fast and adapting to the uses and regulations of different countries.

Individuals can access sales features on the site only after their KYC validated authentication. Professionals must, in addition, to access the sale, validate the registration number of their company.

1.1.3.Trading on SiXyeS

Trading is an English word used in France to designate the operations of purchases and sales made on the financial markets. These transactions are performed by traders in a trading room or on the Internet. It involves speculating on financial products such as equities, financial options, or currencies, with the aim of benefiting in the short term from market fluctuations.

+ **Trading on goods and services**

SiXyeS, thanks, in particular, to trading, offers you the possibility of carrying out financial transactions with everyday products and services. We are entering the era of egalitarian commerce where everyone can trade simply.

+ **Arbitrage on the value of currencies**

Arbitrage is a notion of trading that involves buying a currency or crypto currency to resell it immediately by taking advantage of the price variation on different platforms.

SiXyeS is not a financial platform that offers to buy money (except from HeptaFranc). On the other hand, trade in goods and services can be carried out in several currencies and crypto currencies, which make it easy to opt for the currency, which is subject to fluctuations on different markets and thus easily realize a gain.

+ Speculation with HeptaFranc

In addition to the performance of its trading platform, SiXyeS offers you the incredible opportunity to speculate with its virtual currency: The HeptaFranc. By choosing this method of payment or collection, you can, when the price of the coin increases, as a seller quickly obtain a gain, and as a buyer increase your volume of purchase with the same volume of rooms.

+ Risks related to Trading

The main advantage of trading lies in the expectation of a high rate of return. However, it presents significant financial risks due to the extreme volatility of the stock markets. Other risks are inherent to this activity. Scams in this area are numerous; the AMF has drawn up a blacklist of unreferenced platforms. Like the game, trading also presents risks of addiction.

1.1.4. Geographical coverage of the model

An international vocation

This model has an international vocation. The game of competition is played, until now, through fixed price policy on different foreign markets. Rather than suffer unfair competition between different countries, SiXyeS offers you the opportunity to negotiate anything that can be traded to significantly increase your chances of selling your products and services.

Buyers have the opportunity to negotiate directly with sellers. This principle of permanent direct negotiations between stakeholders and the extensive geographic coverage of SiXyeS accelerate and optimize the sales process.

In addition, the penetration of the international market is difficult and requires having the necessary skills and knowledge within your organization or playing what is commonly known as "The Piston". With the SiXyeS trading platform, the only knowledge needed is its margins to determine a critical

selling price. No need to recruit international trade specialists or to have high relationship placed to position themselves in the global market.

1.2. THE VIRTUAL CURRENCY" THE HeptaFranc "

1.2.1.The coin

HeptaFranc is a virtual currency developed simultaneously with the SiXyeS trading platform with the aim of becoming the main currency of exchange and thus having a function of value regulator of products and services traded on the market international.

The main properties of HeptaFranc are summarized in the table below.

HeptaFranc currency properties

| | |
|---------------------------------|---|
| <i>Algorithm</i> | SHA-256 |
| <i>block type</i> | Proof of work |
| <i>Name of the coin</i> | HeptaFranc |
| <i>abbreviation of the coin</i> | HPTF |
| <i>Adress Letter</i> | H |
| <i>currency unit</i> | iXy |
| <i>block the reward</i> | 307 coins |
| <i>Half block</i> | 164 000 coins |
| <i>Supply of coins</i> | 201392 000 coins |
| <i>Initial amount</i> | 100 696 000 coins |
| <i>URL of the web site</i> | https://sixyes.fr and https://sixyes.com/ |

1.2.2.The operation of the coin on Sixyes

On SiXyeS, you can trade or negotiate thanks to the HeptaFranc. For example, you can exchange a couch for training or negotiate a transport for a service, and those thanks to the intermediate value of HeptaFranc. The latter will have a starting value, which will be defined at the entrance of the exchange platform. HeptaFranc will therefore ultimately be the main exchange value on the platform.

Access to payment or receipt in HeptaFranc will be valid throughout the platform and will be accepted by SiXyeS, according to a maximum number of coins during the first months of activity, both for the payment of the online an ad only for the purchase of advertising space.

1.2.3.Obtaining the HeptaFranc

In order for a greater number, with or without financial investment, to be able to obtain the HeptaFranc, the solutions put in place are numerous. They are detailed below.

Free solutions

Airdrop

An Airdrop is a crypto currency distribution to people who request it in exchange for a non-financial counterparty.

The Airdrop will take three main forms for the HeptaFranc at the opening of the platform.

➤ Downloading a Wallet

It is an electronic wallet that stores crypto currencies and sends or receives funds securely. The Wallet of HeptaFranc is distributed free of charge. It was developed for Windows and Mac for the platform startup and will then be available on Linux, Android and Ios.

SiXyeS will offer coins, for a maximum amount of 30HPTF per person and per wallet, to all persons uploading a Wallet on its website or on one of the partner sites while supplies are used for this purpose.

At the start of the activity, the download of the wallet will not be available. The offered HeptaFrancs will be credited to the customer account on the platform.

➤ Subscription to our social networks :

SiXyeS is present on the social networks represented below; you will find our addresses at the end of this document:

From the opening of the platform and until stocks are already defined, SiXyeS will offer HeptaFranc to any Internet user who likes or subscribes to its online pages. The maximum amount paid for one of its shares will be 5HPTF per social network for one person and a wallet.

➤ Sponsorship

Any SiXyeS customer authenticated by KYC can sponsor up to 25 different people and receive HeptaFranc in return. Each referral will be validated once the referral has made their first purchase on the platform. The next Airdrop will be set up at regular intervals, they may require other counterparties. They will be limited to the total quantities previously defined and specified later in this document.

The rewards

In order to gain customer loyalty and thus guarantee a large number of offers on its platform, SiXyeS rewards sellers, like buyers, for each of their transactions.

These awards will be paid in HPTF according to a percentage varying according to the currency used for the transaction (fiduciary or crypto currency), the price of the financial markets and the maximum distribution threshold defined and specified later in this document.

The platform provides for a system of automatic repayment up to a maximum of 20% of the value of the transaction. This reward will be split between the seller and the buyer.

The mining

Mining is a paid service that involves checking transactions or performing calculations to create new copies (called blocks) of crypto currency. These operations are carried out by encrypting the data and recording them in the blockchain thanks to the computing power of processors, computers or graphics cards. In practice, the users of mining software, called the miners, solve a mathematical problem, parting a code composed of digits and letters, which is called a hash, and which makes it possible to generate the next block of the blockchain.

Before telling you about the specificities of Heptafranc mining, it is important to mention that the mining program is distributed free of charge by SiXyeS, but that mining HeptaFranc is not a free process, it is energy consuming and deteriorates the computer equipment more quickly.

HeptaFranc is pre-mined for 100,696,000 coins for the operation and development of SiXyeS, for investors, as well as being stored to regulate variations in the value of the currency and perpetuate, thus, the model over time. Details of the distribution of this pre-mining on page 27 of this document. 100 696 000 HeptaFranc remain available for mining by all persons outside SiXyeS over a period of approximately 11 years.

The mining program will be phased in from August 2019, as shown below, and will be available to all audiences early in 2020.

The difficulty of mining is increasing over time. Its increase is due to a spread of the mining program more and more important and a calculation to find Hash increasingly complex.

As the mining profits are decreasing, we try to master the diffusion of the miner according to the value added to the system by each. This progressive diffusion, unlike immediate self-service, allows us to reduce the risk of parts storage by large structures.

Once a certain number of difficulties have been reached and the pool set up, only the mining rigs can compete and receive rewards. A mining pool is a community site that allows its different contributors to combine their computing power with the aim of to mine more quickly. To allow everyone to continue mining with a standard computer we have set up our mining pool which has a high potential for developing its shared computing power. A 5% mining commission is withdrawn upon payment of your reward to participate in the development of the model.

We are aware that our project is far from being environmentally friendly, as the manufacture of crypto currency is very energy-intensive, even for those who claim to be environmentally friendly. To limit our impact on the environment, we have significantly reduced the duration of mining, unlike a large number of crypto currencies that are based on models with a large amount of mining parts over the very long term. It is also noted that the printing of fiduciary currencies remains more energy intensive than the production of virtual currencies.

Participation in development

SiXyeS will reward each person, external to the organization, who will contribute to the development of the model around the world with the agreement of the company.

These are, at the start, international referents in charge of promoting on social networks in their respective countries. Participation in development may take other forms during the activity.

Purchases on our partner sites

HeptaFranc will eventually be offered on more than 300 partner sites that will be posted on the "Partners" page of the SiXyeS platform. This offer will only be available under the condition of

purchase from the e-merchant will be limited to the stock available. The coin is provided by the partner to reward the loyalty of its customers. These same partners will be able, gradually, to propose the coin by means of payment on their site.

Paying solutions

The coin purchase

The HeptaFranc will be available on SiXyeS from the launch of the activity and can be acquired by all authenticated persons on the site. Purchased coins will be stored on the client account of the platform until the provision of the wallet in September 2019. The HeptaFrancs can only be used on the SiXyeS platform during this time. Its purchase will be possible on various platforms as the company evolves.

The ICO

An ICO or fundraising, allows collecting funds at the start of an activity. Unlike the IPO, investors do not acquire shares of the company but a number of virtual coins intended for speculation or savings.

The first ICO will be held in September 2019 with a release of the parts at the end of September, the following ICOs will be defined according to the evolution of the investment needs of the company. They will be made for a volume of 30,000,000 coins in total.

1.2.4. The utility of the HeptaFranc Coin

Before being a tool for savings or speculation, HeptaFranc is intended to facilitate and optimize international trade. It can be used especially for :

Realize exchanges between individuals and professionals on SiXyeS

Retain customers by rewarding purchases in HeptaFranc

Buy Goodies in the image of the coin or the web site

Exchanges between individuals outside SiXyeS

Buy goods and services from partner e-businesses

Acquire another accepted crypto currency as a payment method for other sites

1.3. THE MAIN ADVANTAGES OF THE MODEL

The SiXyeS model has many advantages that everyone can take advantage of - professionals, individuals, sellers and buyers. The main ones are presented below :

Time saving

In our modern society, time is becoming scarce and, therefore, more and more valuable for all of us. SiXyeS, thanks to its many easy-to-use features, saves time on a daily basis. On our platform, you can close a deal in minutes.

The time thus saved is all the more considerable for professionals who carry out a large number of transactions per day. The latter can use an independent Broker to manage their negotiations. To save their customers even more time, the founding members of SiXyeS is studying the possibility of setting up a broking service for its users against acquittal of a commission.

Artisans can sell their services directly on SiXyeS without having to make a multitude of quotes.

The ability to accept settlements in HeptaFranc and other crypto currencies makes it possible to sell atypical or expensive goods that are difficult to sell in hard currency more quickly

Buyers also gain time by quickly finding all types of goods and services, without having to make a multitude of quotes or use search engines to try to find e-businesses able to meet their needs.

Trade at the right price

The SiXyeS platform model allows for sales and purchases at the right price thanks, among other things, to:

- HeptaFranc's value regulator function
- the mode of sale of direct negotiation between buyers and sellers
- reducing the impact of international competition
- the elimination of intermediaries
- The multitude of settings available to control the best margin rates.

Rewards

SiXyeS is based on a system that can reward both buyers and sellers for each of their exchange. This award, paid in HeptaFranc, aims to retain customers and maintain a high volume of exchange on the platform.

Trading accessible to all

2. The IMPLEMENTATION OF THE MODEL

2.1. THE GENESIS OF THE PROJECT

2.1.1. The founder

Pascal Groult, born in Cherbourg, France in 1967.

Pascal Groult is an autodidact, who has not followed initial higher education, but who has been able to climb the ladder of the social ladder step by step.

He started at the age of 14 in the building trades, then, integrates the company of his parents in the same sector of activity. He learns rigorously the ins and outs, first, his job, and then management team and site.

At 36, he is interested in the commercial aspect of his business and begins to develop a strong sense of relationship with the customers and becomes an excellent seller. A few years later, Pascal decides to increase the scope of his skills, he undertakes a sandwich course at the ESJDB, to improve in the areas of management, management and overall management of a company. He graduated from Level III and was ranked first.

He learns the culture of Bonsai, and is passionate very quickly for this ancestral art Japanese. He creates an association, in parallel with his professional activities, which he will manage for several years. Today this club, Val de Saire Bonsai, is still active and has several members.

He and his wife take over the family business and simultaneously create a thermal study office. Forerunner in this area, it will be his only failure, because the law making the thermal study mandatory has been slow to see the day. He prefers to absorb this second company, with his SARL P-Groult.

Six years later, Pascal builds an industrial building of 900 m² to house his company. During this work, he learns the work of all construction trades complementary to his. He quickly understands the potential for profitability of the real estate sector and decides to launch successfully in this area.

In 2016, Pascal is interested in crypto currency, and is initiated to the art of trading. He begins mining in 2017, quickly creates his own mining rig and invests in Asics. In 2018, he follows and helps, along with several other participants, an innovative project mixing augmented reality and crypto currency for over a year. With his experience and his detailed analysis of the functioning of the system, Pascal decides to embark on the adventure by creating, at the end of 2018, his extraordinary model: SiXyeS and L'HeptaFranc.

2.1.2.The SiXyeS Appellation

The whole team got involved to find the name of the platform. From this close collaborative work was born SiXyeS. The origin of this name and that we sought, following the proposal of one of us, a name with historical significance. We have chosen that of the Abbé Emmanuel-Joseph Sieyès, famous actor of the French Revolution of 1789 and replace the first "e" by an "X", letter which symbolizes, in numerical language, the crossings, the number of choice and solutions. It is synonymous with cutting-edge products.

Besides representing perfectly our revolutionary model, the name SiXyeS has multiple meanings. What first appealed to us was the identical meaning of the words Si, in French and Yes, in English, hence the pronunciation "Si - X - yeS". Then the first three letters of that name form the word "six" which is the number of founding members. It also symbolizes the six different sales methods offered by the platform, and six yes in English, it means "six yes". Finally, we found that SiXyeS inverted gives SeyXiS, writes "sexi" it means according to the Larousse dictionary "which has an attractive charm" and this is the case of this innovative mode.

2.1.3.The SiXyeS Logo

The SiXyeS trading platform is represented by an Eastern Dragon and a Snake that are two representations that symbolize balance. The Eastern dragon, in opposition to the European dragon, is a favorable dragon that represents the forces of nature. In China, it symbolizes luck and a propitious environment. As for the snake, it was honored by several civilizations. The ancient Greeks represented the eternal cycle of time by the Ouroboros, a snake that forms a circle and bites its tail. He was for them, symbol of renewal or eternity. The Egyptian pharaohs adorned their headdress with a snake because it served as a protector and good luck charm.

The combination of these two iconic icons symbolizes for us the stability of our model and the opportunity that SiXyeS offers to all to make trading differently.

The colors of the logo have also been chosen according to their meaning. Green is the color of hope per excellence and is a vector of luck. It symbolizes above all growth, health, stability and balance. The orange color is stimulating and is associated with energy and action. It conveys values of communication and creativity. It conveys joy, optimism, vitality, strength and endurance.

2.1.4. The HeptaFranc Appelation

The search for a name is not easy in the world of Crypto currency, where you have to be able to position yourself clearly in front of other coins of international renown. The founding members of SiXyeS have retained the name "HeptaFranc" for the virtual currency associated with model.

The suffix "Franc" appeared as obvious to the team simply because the model was born and is based in France and was developed by French. The goal is not to capitalize on the fact that the name Franc, the former national currency of France, will engender nostalgia to give value to the coin, but rather the quality and the innovative side of its Internet platform.

We added the prefix Hepta to the name Franc to represent the number 7 in Greek. It is a figure that from antiquity to the present day has had a strong symbolism for humanity. Mesopotamians have identified seven stars in the sky (the Moon, Mercury, Venus, the Sun, Mars, Jupiter and Saturn). The Hebrew have introduced the 7-day week still in use today. The ancient world founded the, still mythical nowadays, 7 wonders of the world (The Pyramid of Cheops, the Lighthouse of Alexandria, the Hanging Gardens of Babylon, the Colossus of Rhodes, The Statue of Zeus, The Temple of Artemis, The Mausoleum of Halicarnassus). More recently, in the second half of the nineteenth century, the Russian chemist Dmitry Ivanovich Mendeleev elaborated the periodic table of elements that divide the constitution of matter into seven groups of atoms.

The number 7 also has a more spiritual dimension in universally symbolizing creation, knowledge and wisdom. It appeals to enlightenment and lucidity. This is a very positive figure that is also considered a sign of luck in many cultures

2.1.5. The HeptaFranc Logo

The creation of the HeptaFranc logo is the exclusive work of one of the founding members, Mathieu Geiss, technical director. The shape of a heptagon was imposed on him as evidence to best symbolize the name of the coin "HeptaFranc". The color gold, symbol of wealth and prosperity, also seemed obvious to him; just like the little wink, in the background, to the birth region of the project, the Channel. The founding members quickly adhered to his proposal and opted, together, for the inscription of the words "Liberty", "Justice", "Transition" and "Evolution" on the coin, symbolizing at best their vision of the SiXyeS concept.

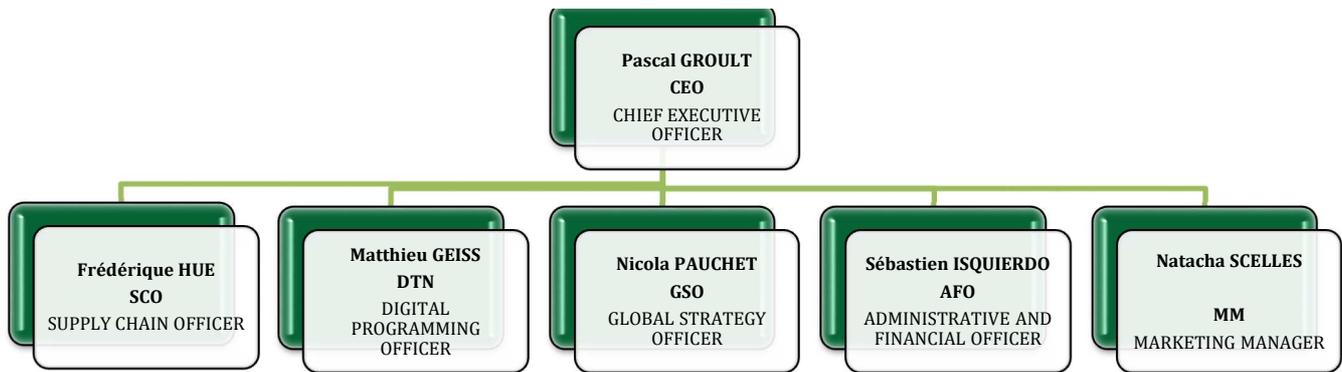

2.2. The team

2.2.1. Founding Members

The company was founded by six founding members who each hold a position at the start of the activity, presented below.

The functions of founding members

These positions and this organization are defined for the start of the activity of SiXyeS and will evolve as the activity develops. You will find below the profiles of the members.

Pascal GROULT
CHIEF EXECUTIVE OFFICER (CEO)

Mission: General Administration of SiXyeS.

Goal: Model development

Training : Holds a Level III degree in Business Management - ESJDB, Saint-Rémy-les Chevreuses High School of Young Leaders

Profile: You will find Pascal's complete profile on page 17 of this document.

Nicola PAUCHET
GLOBAL STRATEGY OFFICER (GSO)

Mission: Development of the commercial strategy.

Goal: Development of SiXyeS and HeptaFranc

Training: self-educated

Profile: Initiated by his father, Nicola discovers the world of finance while he is still a teenager. Passionate, he will deepen his knowledge as the years go by.

An experienced entrepreneur, he was successively manager of a dental prosthesis laboratory, a real estate company and a plumbing company.

Frédérique HUE
SUPPLY CHAIN OFFICER (SCO)

Missions: Administration of production operations and implementation of the tools necessary for the general organization of SiXyeS.

Goal: Optimization of the triptych cost / quality / delay.

Training : Holder of a Master in Operations Management - IAE, Institute of Business Administration of the University of Caen

Profile: Frederique has worked in strategic positions at the heart of the Supply Chain of large multinationals such as Saint-Gobain or Cargill. In turn, Project Manager Migration Information System and Flow Pilot, she was able to gain experience in the organization and transversal optimization of large companies.

In her first career, she was Operations Manager for two Pathé and Gaumont film complexes. Today, Frederique is at the head of her company, "La Manche est Servie", a multi-service concierge for individuals and professionals, which she created in May 2018, currently under the micro-enterprise regime.

2.4. The Financial strategy

2.4.1. ventilation of launch funds

HeptaFranc was pre-mined for 100,696,000 coins, or 50% of the total available volume over a mining time of about eleven years. These funds are intended to ensure the operation, development and sustainability of the model. The breakdown of these funds will be as shown in the graph below.

Pre-mining ventilation

2.4.2. HeptaFranc resources

A portion of the SiXyeS turnover will be realized in HeptaFranc, thanks to:

- Commission on mining pool (5%)
- Sale of advertising insert
- Deposit of ads
- Sale of goodies
- Resources in fiat money

2.4.3. Resources in fiat money

The turnover in fiat money will be realized thanks to:

- Sale of advertising insert
- Deposit of ads
- Sale of goodies

CONCLUSION

SiXyeS is an innovative international model, accessible to all and easy to use, aimed at democratizing its crypto currency: HeptaFranc. New technologies, including virtual and augmented reality, will be highlighted and used on the platform.

The founding members of the company nurture major development projects for the platform but also for other models that will be associated with it. We are currently studying the feasibility of creating a foundation to help disaster victims and rebuild their natural environment. We are also planning to create a bank that will finance micro-credits accessible to all. Our development strategy also includes the creation of overseas branches as SiXyeS business grows around the world.

If you wish to become a partner or participate in the development of our concept, we invite you to contact us; we are an open team ready to study any serious and well-founded proposals.

HeptaFranc will become Great
