

SAFE
MARS

TAKE OFF WITH US!

Overview

The DeFi space has exploded in the recent months. Yield Farming, Staking and Liquidity Mining have taken the space by storm, with participants earning by basically "locking" their tokens for a time.

While generally great, these concepts have one downside: impermanent loss (IL). If you are farming/staking and the value of the underlying token changes significantly, even though you still get rewards, the value will far less than if you simply held your tokens.

The SAFEMARS smart contract applies a 4% fee on all transactions (buys/sells). Out of this, 2% is automatically distributed to holders, without farming! This means the amount of tokens in your wallet will forever increase as people transact. This way IL is avoided altogether and in effect you get paid for just holding SAFEMARS.

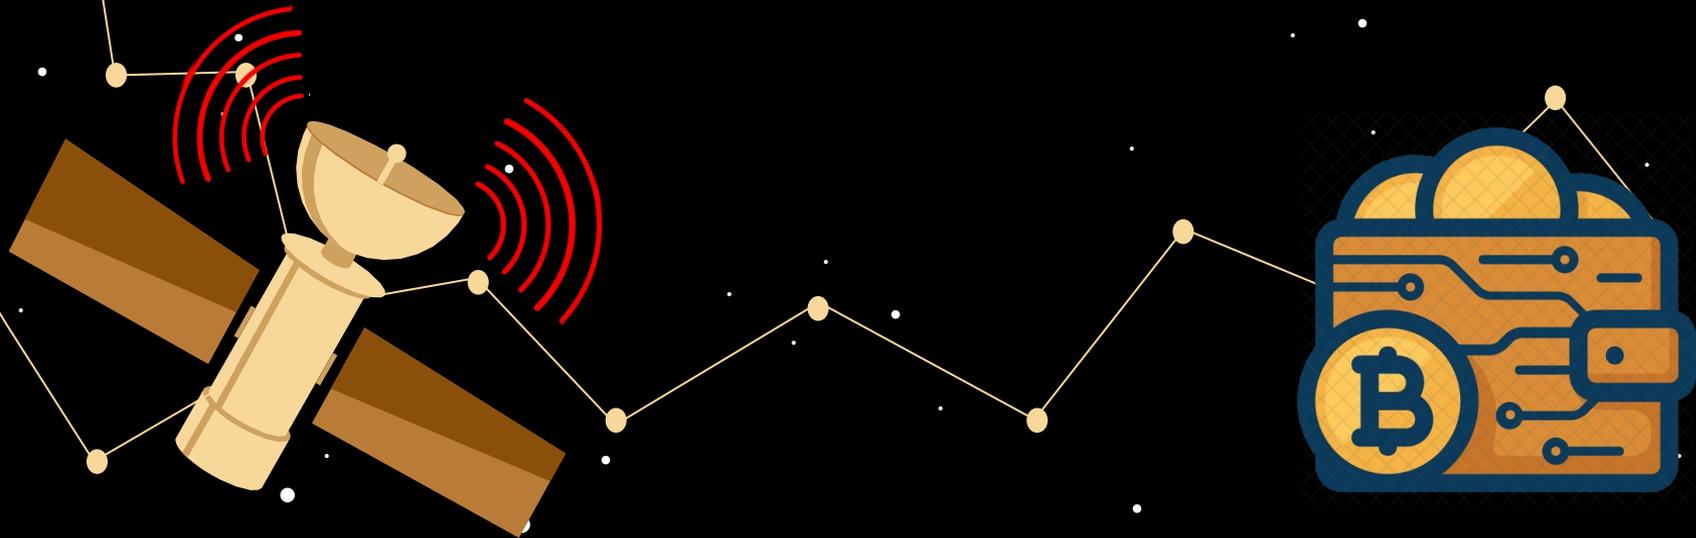

In addition, the SAFEMARS smart contract also takes 2% of each transaction and automatically adds it to the liquidity pool. The liquidity pool will continuously increase, which leads to a higher price floor of SAFEMARS.

This is what SAFEMARS aims to accomplish:

You don't have to farm, stake or deposit your SAFEMARS.

Simply hold it in your wallet and you will get more!

Overview.

SAFEMARS is an autonomous yield and liquidity generation protocol that aims to directly reward its holders whilst concurrently increasing liquidity.

This is funded by a 4% tax taken from each and every transaction.

Consequently, the protocol has a permanently increasing price floor, with all investors earning additional SAFEMARS tokens just for holding.

50%

Distributed proportionally across existing holders

50%

Transformed into BNB/SAFEMARS LP Tokens, and added to liquidity

Reflection

SAFEMARS resides within a class of token that rewards investors just for holding, the amount of rewards received increases over time the longer an investor holds for.

Holders are also rewarded for the success of SAFEMARS with higher transaction volumes leading to increased fees, and rewards for distribution.

We believe this mechanism provides investors with an active stake in SAFEMARS success!

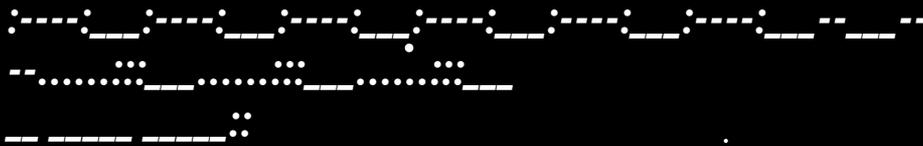

SAFEMARS

● BlackHole Burn (53,5%)

● Team Wallet (6%)

Liquidity locking!
Forever! Constantly!

Liquidity Pool

SAFEMARS was launched with an initial supply of liquidity in the form of BNB/SAFEMARS LP Tokens, Ownership of the tokens was renounced by sending them to the burn address:

0x00

This was performed to protect investors by preventing the possibility of a rug pull via liquidity removal for example.

Additional liquidity is automatically added to SAFEMARS from the 2% fee that is generated from each transaction. The fee is added to the liquidity pool by transforming it into BNB/SAFEMARS LP Tokens, with ownership of the tokens renounced by sending them to the burn address. Consequently, the token has a permanently increasing price floor in addition to an effectively reducing circulating supply of SAFEMARS that are locked in the liquidity pool.

Despite being red,
Mars is a cold planet

Liquidity Locking

To ensure that SAFEMARS is **unruggable**, we continuously "burn" these tokens, thereby **locking liquidity forever**. The burns are completely transparent, visible on the blockchain, and performed daily.

Liquidity Locking FOR-EVER.

Safety

We take the safety of holders funds extremely seriously, and therefore we have taken the following measures to protect our community:

Regular Burns of All
New Protocol
Generated LP Tokens

Initial LP Token Burn

Contract Audit In Progress
with Industry Leader Certik

6% Team Wallet
Allocation

No minting function
present within the
contract

Fairly Distributed Presale. No
Presale Wallets held > 1%

SAFEMARS is therefore unriggable, with no single holder able to mint new tokens, remove Protocol Generated liquidity, or dump presale allocations on the market.

Our crew

SAFEMARS is community owned, and the team is made up of a decentralised group of volunteers from all across the world.

Access to the team wallet is held solely by the developer:
