HEALTHECANCER (HTC)

WHITE-PAPER V1.1

Founded in 2018, HealTheCancer (HTC) is a Blockchain project conceived out of the need to create a much-needed support system aimed at providing financial aids, medical facilities, and scientists for cancer patients across the world through the help of millions of donors. HTC has partnered with some top world charity/health organizations and is also working to partner with the WHO and other prominent charity boards. HealTheCancer is determined to building a world-class community of healthcare services/assistance for the cancer patients

HealTheCancer is committed to fighting major financial challenges encountered by cancer patients globally by sourcing high impact donations gearing towards life-saving treatment for cancer patients through global collaboration of some major charity organizations. HTC is marked as a great importance token to be developed as human lives are most paramount . HTC envisions a cancer-free world.

This will be achieved by deploying a robust platform, social communities & toll-free helplines where beneficiaries can be supported by a personal counselor/navigator and the institution of support groups within their region.

HealTheCancer is working to create the most efficient channel through which cancer patients across the world can gain easy access to appropriate treatment assistance within the best possible timeframe of reaching out to HTC and provide psychosocial services to both them and their caregivers. Support group centres will be set up across different geographical locations and a global network of counselors/navigators will be trained and supported.

In the long term, HTC will institutionalize a coordinated breast cancer support structure that is easily accessible to beneficiaries.

HealTheCancer is collaborating with some top world charity/health organizations and will through the HTC communities, volunteers and councilors reach out to millions of Cancer patients across the globe . At first, for proper auditing and reports, we would create a detailed database of cancer patients reaching out to us. A clear report of donation/assistance rendered will be made available through our governing body to the communities.
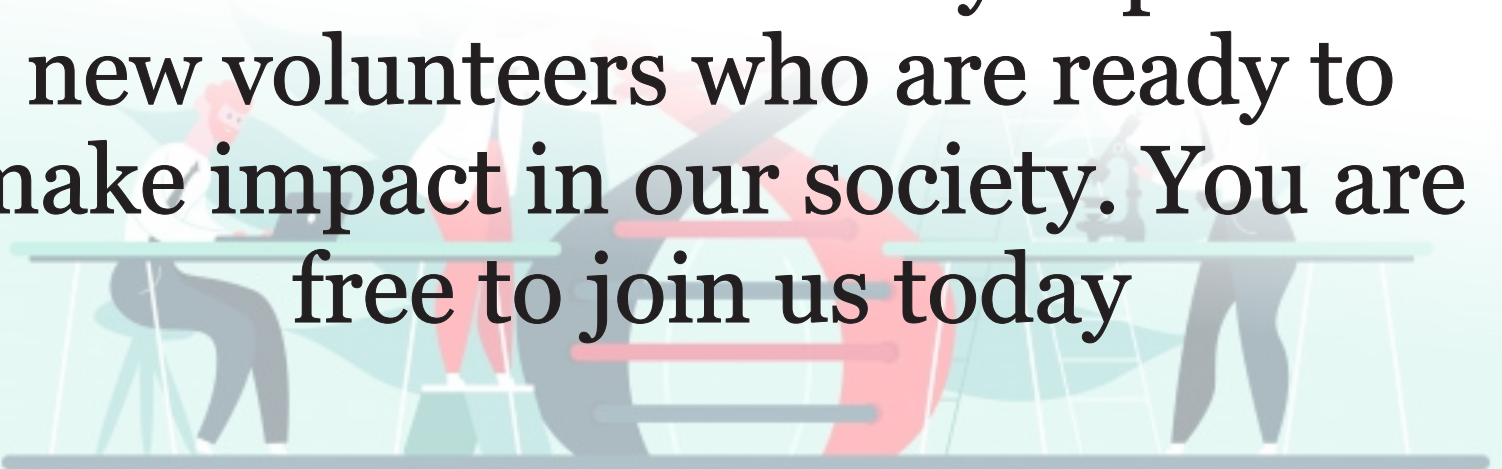

WHAT YOUR DONATIONS CAN DO

I. $1,000 – Carries out a comprehensive genome-wide analysis on all genes in one tumor sample, for developing targeted and personalized cancer therapies

II. $100 – Performs one biopsy to get tumor tissues from a patient for a variety of pathological tests and biological analyses

III. $25-$100 – Stains one tissue slide from a tumor biopsy to look for a predictive biomarker of cancer metastasis

IV. $500-750 – Buys one antibody test to determine whether tumor cells have a specific marker for drug resistance

V. $250 – Buys one case of petri dishes for growing cancer cells – an essential first step to identify tumor markers or test treatment effectiveness of new drugs

We understands how challenging it can be sourcing for financial assistance and reaching out to cancer patients in remote areas. That's why we've partnered with several volunteers and charity boards across many world countries. They are in this with us and believe in our mission as much as we do. We are always open to new volunteers who are ready to make impact in our society. You are free to join us today

POLICIES

HealTheCancer is obliged by to maintain these policies:
