

GEM PROTOCOL

AN INTRODUCTION TO GEMTOOLS, \$GEM AND THE GEM ECOSYSTEM.

Our mission is to generate value for the BSC community through dApps and utility projects.

gemprotocol.io

INTRODUCTION

GEM PROTOCOL is a BEP-20 protocol which provides decentralized applications on the BSC blockchain.

Following a market movement, the most resilient tokens are the ones that offer some kind of tool to the community.

From the first day of the launch of GEM PROTOCOL we offer free tools and dApps.

All \$GEM growth efforts will be invested in creating dApps and improving existing ones. Our marketing is to have good applications used by many people.

TOOLS

Portfolio Tracker is very similar to CoinMarketCap's portfolio application but compatible with ANY coin / token from Binance Smart Chain.

You will be able to track the price and performance of all coins you have in your wallet. All information is automatically consolidated. No need to enter information manually.

Rug Checker the contract information for all BSC tokens is public. We gathered the information from several of them and made a basis capable of analyzing whether a contract has functions that are considered dangerous and that can result in rug pull. This analysis uses a history of other tokens that have done rug pull in the past.

New Tools Many projects are already being developed such as Multichart, Gem Finders, eCommerce integration and NFT Mint. Among others more secret.

TOKENOMICS

1%

REFLECTION

1% fee redistributed to all holders including black hole.

1%

LIQUIDITY ACCUMULATION

1% fee on sell trades added to the liquidity pool by smart contract locked forever.
