

FREE YOUR VOICE

WITH LIBERTAS VOX

OUR MISSION

Social media giants have transformed the way we communicate. Recently, their power to limit free speech has been put into question. Libertas Project is building a censorship resistant alternative utilising blockchain and IPFS technologies. We recognise the importance of enabling free speech in the world of social media and online communication and build our platform along these principles. We believe nobody's livelihood should be put at risk due to a central authority and utilise crypto payments to avoid any 3rd party involvement.
