What is Mastermind ?

Mastermind Games is a platform for the future of gaming. It will accelerate growth for developers and businesses by offering tools and services that save time, energy and resources.

Mastermind games also offers services to diversify investments. The platform will be able to launch and provide support, assisting with liquidity loans and blockchain development.

Mastermind Games is an all-in-one platform which will host entertaining, high-quality blockchain games. Our goal is to incorporate cryptocurrency with traditional games and gamers yet to enter the crypto space. This will be done by fostering an easy entry for traditional game developers who do not want to deal with the challenges of developing a token, building a token community, and blockchain development. Many game developers want to create these types of games but don't know where to start or don't want to deal with everything that entails self-launching a token. Mastermind Games will blend traditional games with a centralized exchange platform model that is centered around our flagship token (MGT) and our in-game currency token (MGX).

Our platform will offer various choices of gaming such as P2E, F2P, P2P and Mint2Play models as well as smart staking options. We are revolutionizing the market with a more open, accessible and decentralized Binance-powered crypto swapping where MGT will be swapped with in-game currency MGX. Unlike other conventional platforms, our platform will allow investors to generate more value for users' crypto-assets.

Mastermind Games is a community-oriented platform that provides Binance blockchain to people where they can develop, play, earn and invest.

OUR VISION

We envision a platform where gamers and developers can be unified with providing fun, along with equality and fairness for the ways gamers choose to invest on the contents. Mastermind Games aims to cater everything they need in one gaming ecosystem. We also combined wealth-building strategies that were previously only available to accredited investors. With our platform, a new level of leverage is now submerged from traditional gaming and the revolutions of decentralized finance (DeFi) become available to everyone, restoring the people's control over their finances in gaming. The Mastermind Games network constitutes an innovative ecosystem to attract more people to digital assets & various options of gaming while maintaining their privacy, security, authority and autonomy. Our objective is to increase global economic freedom for gaming enthusiasts.

Mastermind Games Vision is Encapsulated With Three Main Components:

VISION STATEMENT

Community-Focused

More focused on supporting and caring for community.

Innovation

To be the world's most crypto-centric platform

Wealth-Building

Embarking on new wealth raising strategies worldwide

OUR MISSION

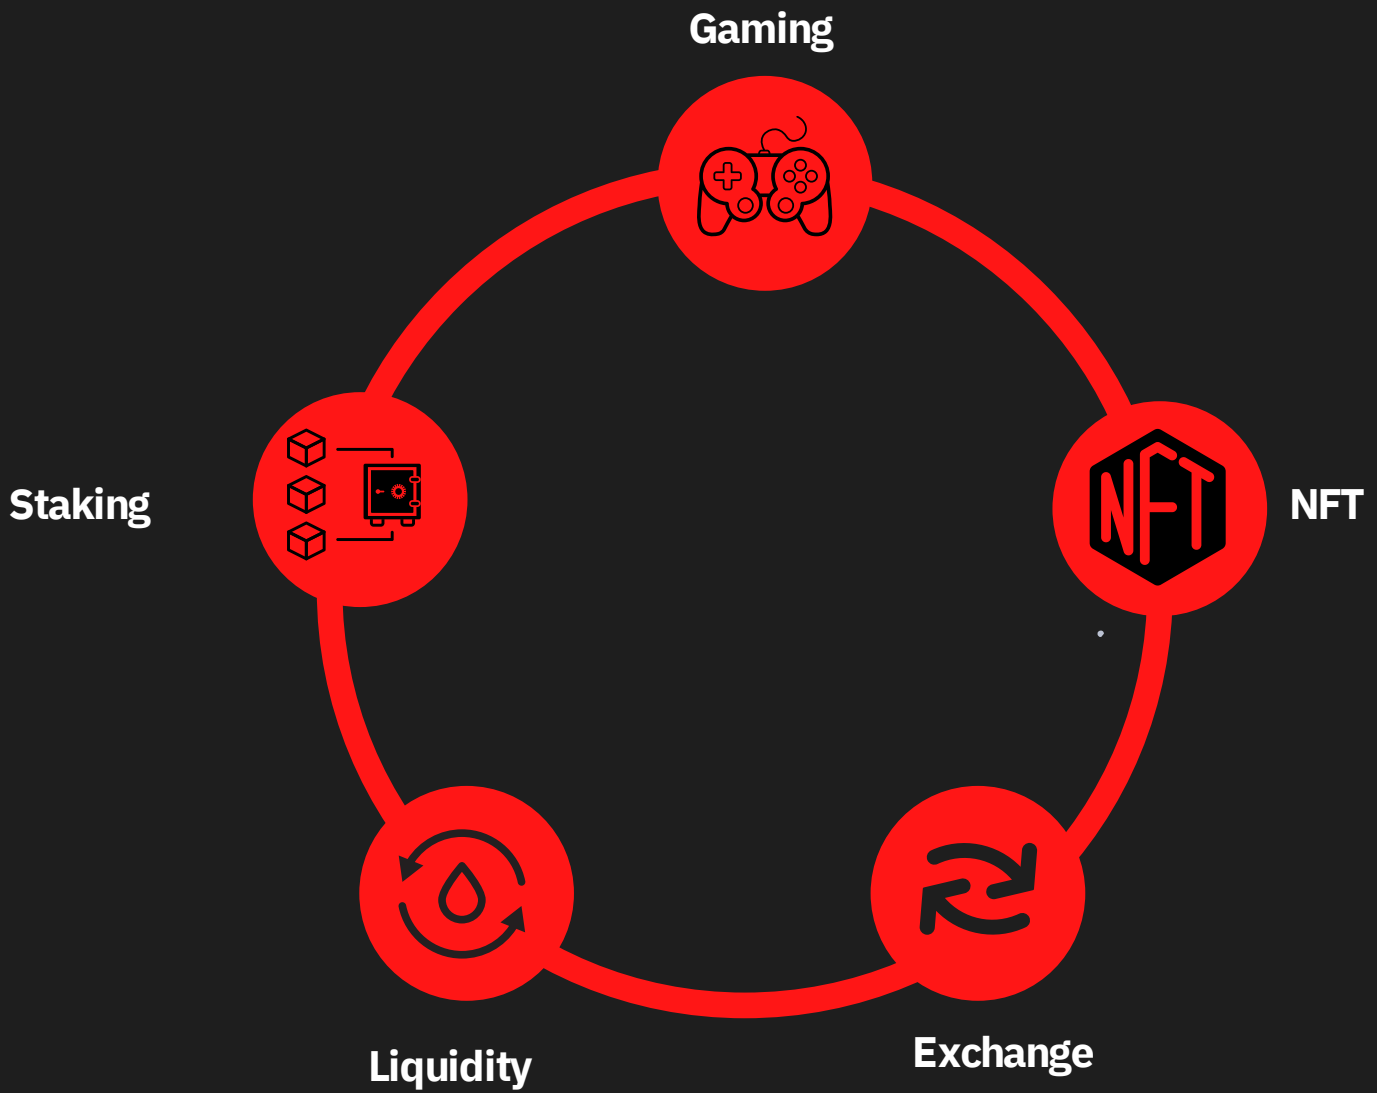

The long-term goal of Mastermind Games is to be the all-in-one solution for centralized gaming and trading while offering a wide array of valuable services from marketing to finance. Our mission is to take "Mastermind Games" to new heights by providing players with an innovative, user-friendly, all-in-one platform to provide all users an equal chance to manage and improve their financial security along with enjoying the games on the Mastermind Games platform. Mastermind Games future will be about our community and society of gamers. With our long-term-oriented projects & providing the choices of "fun" on P2E, F2P, P2P, Mint2Play, Digital Assets, etc. We will keep focus and retain our investors by offering exclusive options and future contracts to support the gaming ecosystem.

- Facilitating global growth by providing opportunity to financial independence for game enthusiasts.
- Creation of a next-generation complete all-in-one platform.
- Implementation of innovative digital projects and marketplace.
- Operating as a community-focused and community-driven digital asset, integrates decentralization feels into the ecosystem.
- Providing a platform for investors to diversify their investments between various services like developer tools, Staking and Trading.
- Providing tools and services to accelerate growth of start-up for developers.

MISSION

ECOSYSTEM

Mastermind Games Staking

Staking is the most effective way to maximize earnings that would be present in your account. Once you have held your Mastermind Games NFT or token, you can earn rewards on top of your holdings and grow them further by compounding those future rewards. The Staking platforms enable investors to obtain rewards in exchange for locking away assets for a period of time. Hence, Mastermind Games will in essence become a vehicle to earn passive income.

As an incentive to acquire and keep staking assets, you can receive incentives by staking our token for a set period of time. Since it requires certain technological crypto know-how and compliance criteria, Mastermind games staking platforms are useful for allowing investors, including those lacking technical knowledge of cryptocurrencies, to hold tokens and receive rewards. In response to the tremendous increase in crypto staking, staking platforms that allow investors to receive staking incentives have sprouted up. If you're interested in earning a passive income by staking, this is the place to be.

There are a few quantifiable benefits of Mastermind Games with Mastermind Games ecosystem:

Gaming Ecosystem

Mastermind Games Token is an open gaming ecosystem with the following features:

- Adventure modes and in-games contest. Including P2E, F2P, P2P and Mint2Play models.
- Provide Opportunity to game developers to become a part of gaming ecosystem.
- Buy and sell in-game items such as NFT.
- Complete quests & clear levels by fulfilling requirements.
- Games onboarding and updates.
- Digital Assets Rights Management & Digital Assets Exchange.
- Player Community Interaction & Player Database.
- Mastermind games allows players or token investors to compound their profits by staking.

GLOBAL GAMING INDUSTRY

The growth of social networks, cell phones, and tablets in recent years has given rise to new genres such as mobile and social games. Since the first games were released in the 1970s, video games have come a long way. Today's video games have photorealistic visuals and, in many cases, accurate simulations of reality. The value of the global video game market is depicted in this timeline below. The market was valued around 115 billion dollars in 2018, with sales likely to exceed 138 billion by 2021, according to sources.

As user involvement with gaming rose during the worldwide COVID-19 epidemic, the average number of in-app purchases per paying user climbed to an all time high across all gaming genres in 2020. Free to play mobile games are the most profitable genre according to another poll of game creators.

MASTERMIND GAMES MARKETPLACE

Mastermind games Marketplace is a vital part of our ecosystem dealing with NFTs. Mastermind games is a company that specializes in providing financial Non-fungible tokens (NFTs) as one-of-a-kind, non-transferable assets created on the blockchain. These will be linked to the ecosystem of Mastermind games.

The key characteristics of Mastermind games NFTs distinguish them from other forms of assets and give them a distinct value. These characteristics include verifiably uniqueness and authenticity. The scarcity and ownership of any particular token may be ascertained without the requirement of a trusted middleman since the underlying code is visible.

The gaming platform will allow users and gamers access to our ever growing number of onboarded games and to our NFT Marketplace. Utilizing MGX, the marketplace will act as a centralized market for all games on our platform with options for buying and selling of digital assets (NFTs). The marketplace will allow users to build their perfect characters, work on in-game decorative features, and sell unwanted NFTs from games they no longer play.

Gamers, like never before, will actually own a part of their gaming experience when before, buying in-game perks and skins would only benefit the gamer while actually playing the game. With Mastermind games, your investment into the game will now have a monetary value you can take with you. When users make purchases in traditional games, their investment belongs to the game developers but with the Mastermind Games platform, users control their purchased assets and can enjoy buying and selling game assets like never before.

Our NFT holders will get the following rewards. Some of the advantages of Mastermind games NFT include:

Ownership Rights

Non-fungible tokens have a major benefit in that they may be used to verify ownership. Because they operate on a blockchain network, NFTs can help to bind ownership to a single account.

Authenticity

Non-fungible tokens' benefits are mostly defined by their scarcity. They bind ownership to a single account. NFTs' unique characteristics demonstrate their capacity to add value. Simultaneously, NFT makers can release a limited quantity of NFTs in order to generate supply scarcity.

Fraud proof

They're simple to transmit and aren't harmed by fraud.

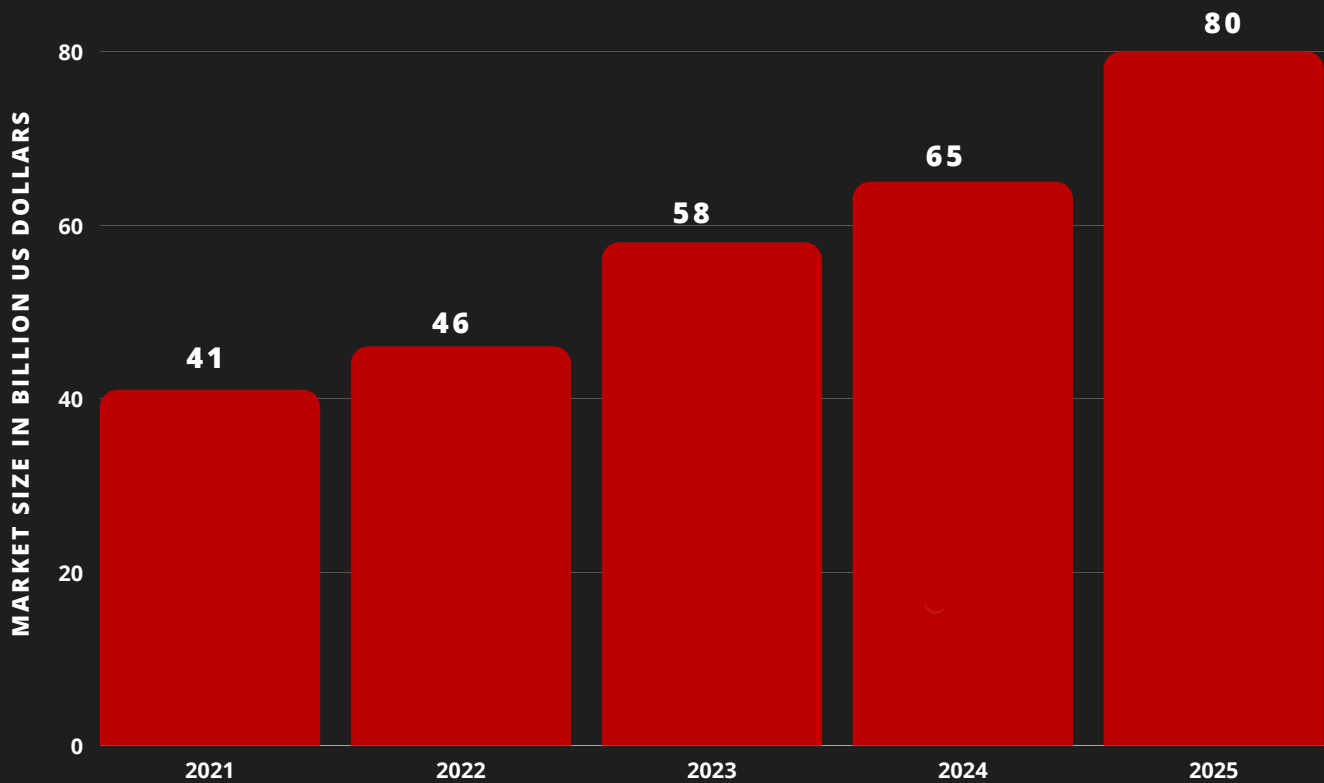

We will launch our NFT marketplace that will be connected with our ecosystem. The advent of NFTs, in our opinion, is part of a larger paradigm shift away from centralized to decentralized systems. This platform is now allowing developers of digital items to experiment with new revenue strategies. Mastermind games will become a known NFT project with physical utility. The underlying token for each Mastermind games asset encodes a unique code of ownership that cannot be replicated and cannot be transferred without the user's permission.

GLOBAL NFT MARKETPLACE

According to a recent estimate from blockchain analytics firm Chainalysis Inc., about \$41 billion worth of crypto was connected with smart contracts related with NFT markets and collections from the beginning of 2021 until mid-December.

Last year, the popularity of non-fungible tokens (NFTs) skyrocketed, with multimillion-dollar sales and celebrities like musician Shawn Mendes, socialite Paris Hilton, and former first lady Melania Trump are on board.

The NFT market is predicted to expand at least 33% annually, reaching \$80 billion in net sales volume by 2025 and almost \$350 billion by 2030. Though this may appear to be a large amount, we are convinced that the market's real growth will much exceed the investment Jefferies' forecasts.

Mastermind Games Exchange

Mastermind Games Exchange is an easy, fast, and secure exchange in a truly decentralized way. We are going to launch our own Exchange. It connects buyers and sellers. Mastermind Games Exchange is non-custodial, meaning a user remains in control of their private keys when transacting on our platform.

1-NO KYC/AML

KYC/AML (Know Your Customer and Anti-Money Laundering) compliance is the norm for society. For regulatory reasons, individuals must often submit identity documentation and proof of address. Our exchange doesn't demand any document for verification purpose making the users completely anonymous.

2-LOWER FEES:

Mastermind Games Exchange functions through the smart contracts. Our exchange charges a minimal fees.

Centralized exchanges (CEX) operate to facilitate the exchange of crypto-currencies through purchases made by fiat or other cryptocurrencies. A cryptocurrency project will launch through a centralized exchange by providing liquidity, therefore allowing their token to be bought or sold on the exchange.

The CEX now owns the token in a liquidity pool and opens the token for trading, achieving revenue from fees associated with trading and fees collected from token projects launching on their exchange. Taking this model, we have created a similar experience to easy entry into blockchain gaming while centering it around our tokens, primarily Mastermind Games Token (MGT). There are certainly many ways to launch a token outside of a centralized exchange, but token projects look to launch on these exchanges due to the larger user base which tend to offer a larger potential of growth.

Introducing Master Ex

Our gaming exchange will be the gateway to enter our gaming platform where you will be able to convert Mastermind Games Token (MGT) to our in-game currency (MGX). It will act as an in-house centralized exchange for Mastermind Games.

Master EX is a swap which will also offer a staking feature along with selections on the pairing of choice within our ecosystem. This adds stability to our token floor price. On the swap, users can safely convert MGX back to MGT or convert MGT back to BNB or BUSD as desired.

The Master Exchange may also include access to our other products and services in the future.

Can users acquire MGT from other swap sources and exchanges?

In the future, we may provide MGT to other swaps and exchanges to create convenience to traders and holders. However, our on ramp structures will offer better ease of access to our tokens and platforms. This will assist in enabling us to not only onboard game developers but also users outside of the crypto space.

MASTERMIND GAMES SWAP

This platform is designed to allow users to securely Swap Binance Coin (BNB), MGT, and MGX and many others tokens without relying on 3rd party services or losing control over their private keys. As a exchange, all trades on are automatically executed via smart contracts — completely eliminating counterparty risks.

There are many great reasons our users will love using Swap

- Quickly swap into an asset you believe will grow.
- Move out of a volatile asset into one of our stable coins.
- Master EX Swap are integrated into the blockchain which will allows users to search and select the best rates for the transaction. An additional benefit is that some crypto swap services do not require users to create an account

LIQUIDITY

Providers of liquidity are compensated with LP tokens. Users pay trading fees on Exchange, which are distributed to liquidity providers based on the number of LP tokens or percentage stake they control in the pool. LP may incur a temporary loss as a consequence of providing liquidity, and may not get the exact quantity of tokens returned.

The Mastermind games protocol ensures that the assets of token holders are promptly seized and frozen for liquidity. The major objective is to keep the holder aware of the MGT performance by preventing huge drops in bulk trade-offs. The DeFi, as deflationary like tokens, has a high price value with little volatility on the trading market.

Automatic LP is the MGT's secret. We have a function here that serves a dual purpose for holders. To begin, the contract takes tokens from both sellers and buyers and deposits them in the LP, therefore providing a steady price floor. Second, the penalty acts as an arbitrage-resistant mechanism, guaranteeing that the MGT supply stays secure as an incentive for holders. In theory, the extra LP offers stability by adding the tax to the token's total liquidity, so increasing the token's overall liquidity and preserving the token's floor price.

This is in contrast to the burn function of other reflection tokens, which benefits only in the short term from the specified supply reduction. The MGT LP's price stability mirrors this function, but with the extra benefit of a fixed price floor and cushion for holders. The goal is to minimize larger price declines when whales sell their tokens later in the game, preventing the price from fluctuating as much as it would without the automatic LP mechanism.

This is all in an effort to alleviate some of the shortcomings of the current DeFi reflection tokens. As a result, we are certain that our system approach and protocol will defeat outmoded reflection tokens.

How does this platform benefit game developers?

There are many challenges when developing and launching a token as well as growing a community that will buy your token and game. Mastermind Games will have an already established and developed token, liquidity pools, and a holder base which will be able to market and help ensure success of the game. Such benefits will lessen the burden of game developers who don't want to add additional challenges beyond their game development, marketing, etc. Developers will have access to an established crypto project that could also provide marketing funds to ensure a successful game launch. Additionally, technical support on the blockchain end becomes easier due to fact the token is already established and has a fully supportive team behind it.

Game developer onboarding options

- ❖ Game developer provides the necessary liquidity into our pool and they receive a 70/30 game developer/Mastermind Games revenue split after Mastermind Games receives it's initial investment in return. The option works best with a medium size games where developer may require assistance in game updates or expansions.
- ❖ Mastermind Games provides the needed liquidity and the game developer will receive a 50/50 split revenue with Mastermind Games. This option works best for larger games where a large user base is expected and more liquidity is needed.
- ❖ Mastermind Games provides a liquidity loan where a 50/50 revenue split is agreed upon with a small interest until the loan payments to Mastermind Games are complete.

How does this platform Benefit gamers?

Mastermind Games will bring traditional games and crypto together, merging two worlds into one. It is designed to bring equality to gamers. Gamers can now invest in things such as skins, characters and other assets that will be integrated into collectible NFTs. This will allow players to profit by playing games which have been onboarded on the Mastermind Games platform and later selling their investment when they are done playing a certain game. Most traditional games now allow gamers to purchase in-game assets but the gamer does not actually own the asset. With our platform, gamer's hard-earned money can circulate back to the players, unlike traditional gaming where only the developers benefit from creating such content.

HOW DOES THIS PLATFORM BENEFIT MASTERMIND GAMES & INVESTORS?

This platform will provide blockchain gaming to traditional gamers and as well to our holder base. Each game added to our platform will assist in company growth by adding revenue from swap and marketplace transaction fees. Onboarding each new game will provide additional liquidity that we can control. This can ensure that the market cap of the token continues to grow.

We plan to have the majority of holders staked in these liquidity pools that games will use for in-game currency. This will ensure minimum liquidity requirements and promotes the "bottom" of the token cap to always grow and stay consistent. These liquidity pools, along with the expected revenue from our various games and other entertainment platforms will provide strong company growth.

How to Buy?

Gamers and holders can enter the Mastermind Games ecosystem with 2 accessible options:

1. Using BNB or BUSD to convert into MGT
2. By making a direct purchase of BNB via the on-ramp service on the Mastermind Games website and convert into MGT.

Users are then able to access the Master EX swap and convert the MGT into MGX as our in-game currency. With MGX in the wallet, users can interact, access, and play our ever-growing amount of games and as the Mastermind Marketplace

In the future, we aim to partner with on-ramp services to provide ease of entry & exit of crypto space for the masses globally.

Partnership Program

Through our partner program, game developers can host with us and receive up to 100% of the development costs and support from our team. This partnership will enable us to assist in development support and allow for a percentage of revenue to be shared to the game developer from in-game transaction fees accrued from our NFT marketplace and initial minting.

Mastermind Games will provide the tokens necessary (MGT, MGX) and the blockchain support, if needed, for integration into the game. Like a centralized exchange, liquidity into one of our game pools will need to be provided. This will allow tokens to act as in-game currency in order to facilitate the purchase of in-game items that can be provided optionally through NFTs.

WHY Choose Mastermind Games ?

Transparency & Immutability

With Mastermind Games, each time an exchange of tokens is recorded on the multi-blockchain, an audit trail is present to trace where the token came from. This can not only help improve security and prevent fraud in exchange-related businesses, but it can also help verify the authenticity of the traded assets.

Lower Fees and Security

The fees associated with Mastermind Games token transactions are far less than those associated with debit, credit cards as well as wire transfers, and BACS payments. Mastermind Games is a secure and private cryptocurrency that keeps the investor's assets anonymous without compromising security.

Transaction Traceability

Mastermind Games is far more secure than other record-keeping systems because each new transaction is encrypted and linked to the previous transaction. Mastermind Games is formed by a complicated string of mathematical numbers and is impossible to be altered. The immutable and incorruptibility of Mastermind Games makes it resilient against falsified information and vulnerabilities.

Ease of use

Ease of use is the reason why Mastermind Games has intrinsic value. All you need is a smart device and internet connectivity. Investors can easily earn rewards by holding the token.

Safe & Secure

Mastermind Games is a safe and secure platform and our technical team is continuously improving the security of the system to ensure the safety of platform.
