OVERVIEW

With so many complicated terms and ways to make money in crypto, wouldn't it be GREAT if there were one token that covered *all* your DeFi needs?

Goal: Create one cryptocurrency token that takes advantage of the best parts of **DeFi** (decentralized finance) to provide passive income to its holders. **CEFA** bridges the gap between the explosive tokenomics of moonshots with the long-term stability of a crypto savings account.

How It Works: Crystal Elephant Farm (CEFA) gives you all the consistency, variety, and flexibility you need - all in *one token* - to profit in crypto today.

Like its DeFi cousin, [CETO](#), every CEFA transaction is **taxed 10%**, but with **6% in rewards** to users and **4% providing liquidity**. A modest **100 million token supply** promises **20 years' worth of monthly airdrops** to holders, **dividends** to the CETO Blockchain Family of existing tokens, locked **liquidity with burnt LP tokens**, and robust **yield farming** for plenty of staking opportunities. With every transaction earning rewards, dividends to CETO, providing liquidity, and burning the token supply, CEFA is designed for **scarcity and longevity**.

Process: Exchange **Binance Coin (BNB, BEP-20 Binance Smart Chain-compatible)** for CEFA tokens. **Ten percent of funds** from every transaction - deposited, withdrawn, or transferred - are taxed, with dividends automatically compounded in your wallet. Within this simple structure, however, more rewards for the investor await.

STRUCTURE

Most hourglass contracts suffer from ***pump-and-dumps*** - early adopters/users getting in early and, later, withdrawing their funds at the same time after some critical mass of new holders have invested - thus endangering their token lifecycles. With up to twenty years worth of a variety of guaranteed rewards to its holders, CEFA is a ***pump-and-hold***.

Token Properties

Network: Binance Smart Chain

Base Currency: BNB

Supply: 100,000,000

Transaction Fee: 10%

- **6%:** reflection rewards back to holders
 - **~0.75%:** rewards to CETO Blockchain Family holders
 - **~1.2%:** burned to Fertilizer Bag account

- ~4%: proportionally distributed and compounded into CEFA holders' accounts
- 4%: automated liquidity on PancakeSwap
 - 2%: BNB
 - 2%: CEFA
 - Creates **CEFA-BNB Liquidity Pool** (LP tokens FERTILIZED/**burnt**)

*These numbers and percentages are starting values and approximate. Actual values will change over time due to the nature of reflection rewards and fertilized tokens.

Tokenomics

Supply: 100,000,000

- 24.4M: Monthly airdrops
- 20M: Initial Farm Offering supply
- 20M: Fertilizer Bag account
- 12.5M: CETO Blockchain Family
- 12.3M: 90-day bond funds (CETO Bonds)
- 4M: Yield farming
- 2M: Community support/Marketing
- 2M: Locked liquidity
- 1.5M: Team
- 1.3M: Development fund

Initial Farm Offering (IFO)

This 20 million allotment of the token supply will be the primary circulating supply for use and exchange. The process of distribution is through a token sale, commonly known as an **ICO**.

How do we achieve all this? Through this offering at discounted prices, we will put up one-fifth of the token supply (20M CEFA) for sale to the public. With all of the value and utility CEFA provides, we may never see its price this low again.

Monthly Airdrops

If FREE is your fee, then you're in the right place. Enjoy your share of **100,000 CEFA** airdrops across all CEFA wallets. Every 30 days. For 20 years.

Tokens locked by [Team.Finance](#) on a preset release schedule. No trust involved.

Fertilizer Bag

Fertilized or “burned” tokens are sent to a dead account equal to 1.2% of transactional activity of the contract.

Why do we willingly destroy 1.2% of each transaction? In order for CEFA to be a properly **deflationary token**, we reduce the supply to increase demand. The more volume created exchanging the token back and forth, the more scarce it becomes – **driving up the price**.

And with only 100 million total CEFA available, you are more likely to “feel the burn” than those trillion-plus token supply memecoins.

CETO Blockchain Family

Every buy, sell, or transfer, just under 1% gets shared with ALL tokenholders in the CETO Blockchain Family (CETO, BCETO, ECETO), distributed as dividends on a regular basis.

What is CETO, you may ask?

Crystal Elephant Token (CETO) is like CEFA but with 30-day early withdrawal penalties up to 75%. With this token, 100% of its 10% transaction fees are returned as dividends to holders.

BCETO & ECETO are the Binance Smart Chain (BNB) and Ethereum (ETH) versions of CETO.

With CEFA, roughly 0.75% of each transaction is pooled into a separate, rewards earning account. Periodically and automatically, this account will

evenly buy B/E/CETO, continuously auto-sell the tokens to incur the 75% penalty, until all dividends are distributed to holders.

CETO Bonds

This is our upcoming financial offering that shares **150,000 CEFA** from a locked pool of tokens **every 90 days**.

When they become available, buy a CETO Bond using one of our legacy tokens CETO, ECETO, or BCETO, redeemable in 90 days. This **cross-chain investment instrument** shares proportionally with each CETO Bond holder from that locked CEFA pool. Yes, this will happen on a quarterly schedule for crypto eternity, er, 20 years.

Not only do you get the price appreciation of CEFA's free-market popularity, but also enjoy the extra dividends piling up in the CETO Bonds pool. Earnings will be distributed equally across CETO, BCETO, ECETO tokens, but proportionally by one's holdings. Gotta collect 'em all!

Welcome to the CETO Blockchain Family.

Yield Farming

1M CEFA every 90 days (4M total) in yield farming will give you a safe staking places to earn APY gains in BNB.

Community/Marketing

This fund will be used for airdrops, influencer payments, giveaways, etc. designed to raise awareness and expose future holders to the value of CEFA.

Locked Liquidity

Some tokens lock their tokens for 2 years, 4 years, even 20. How do you like FOREVER?

With **2,000,000 CEFA-BNB liquidity** to be provided on PancakeSwap and other exchanges, we chuck those LP tokens (like receipts for the money we provided) into the compost heap and mulch it into oblivion. *Burn, baby, burn* – and swap whenever you want for the tokens you need.

Team

Locked for the first 90 days, then **released quarterly over 4 installments every 90 days for 1 year**. This disbursement schedule, along with a tiny 1.5% of overall tokens to CETO Foundation, indicates that the team is dedicated to the long-term success of the project and not a quick strike pump-and-dump rug-pull at the expense of players and holders.

Development Fund

To incentivize development in the CEFA-CETO ecosystem, this portion of tokens will be used to reward community ingenuity and help compensate for professionally created product.

79% Ownership Renounced

A smart contract can be only but so smart.

While the major financial components of the CEFA contract are automated or **ownership renounced**, we still need to be able to make operational decisions for **marketing** (2M CEFA), **development** (1.3M), **farming** (4M), and, well, *ourselves* (1.5M).

Also, we need the funds to execute **CETO Bonds** (12.3M). Once we turn it on, we cannot turn it off (for 20 years!). Instead of not acknowledging this until after launch, we're telling you all this up front.

We know trust must be earned. We're not asking you to trust us 100% - just 21%.

Proof of Lock: Read our Medium article [here](#)

BENEFITS

Why should you join the Smart Farm?

- More passive income
- More transactions and dividends for B/E/CETO
- A liquid complement to the savings elements of CETO
- BEP20-compliant and swappable with other Binance Smart Chain tokens
- Ability to stake and yield farm
- Helps finance bringing CETO Foundation products to market across all three chains
- No 30-day early withdrawal penalties

Instant utility

While most new tokens launch without a product, enjoy the ability to use CEFA in our existing and future BCETO-compatible games and products.

Big Tent: a rolling, no-loss crypto raffle that pays dividends to all players

Provably Fair: four popular dice-based games of chance

Circus Maximus: the CETO gaming brand, with 21 Elephants (Blackjack), Stampede (Speed), Spades, and more to come

From NFTs to DEXs, there will be something for everyone.

One Token, Eight Ways to Profit

REWARDS: Every buy, sell, or transfer, 6% gets shared with ALL tokenholders

DIVIDENDS: Every buy, sell, or transfer, ~1% gets shared with ALL tokenholders in the CETO Blockchain Family (CETO, BCETO, ECETO)

AIRDROPS: 100K CEFA shared among our holders, every 30 days for 20 years

FARMING: 1M CEFA every 90 days (4M total) in yield farming to give you a safe staking place to earn APY gains in BNB

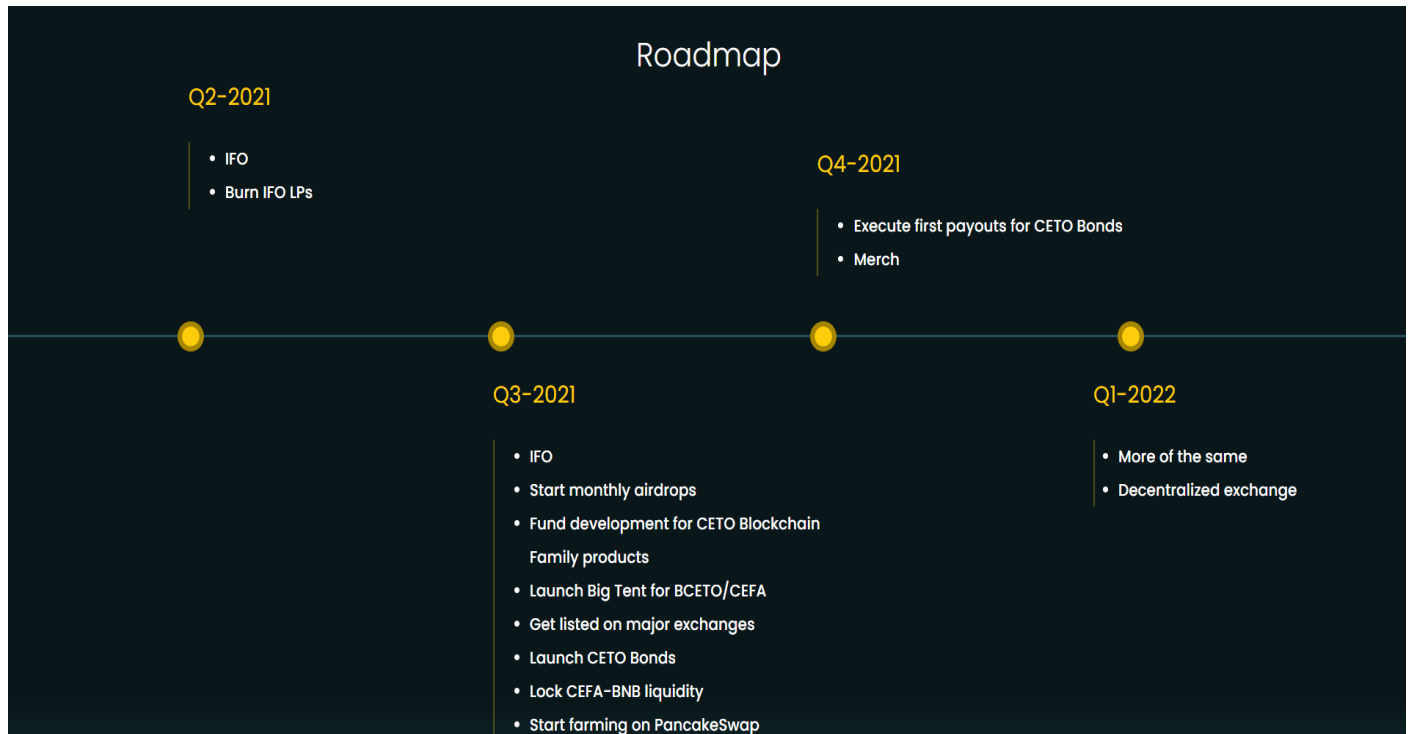

BONDS: Upcoming investment instrument that shares locked 150K CEFA pool every 90 days for 20 years, distributed proportionally as CETO, BCETO, ECETO

FERTILIZER: A 1.2% burn on every transaction through reflection rewards creates a continuously reducing supply - and higher price

HOLDING: The more volume in CEFA, the higher the price for CEFA and B/E/CETO

PRODUCT: Use CEFA with all forthcoming BCETO games and products

ROADMAP

Future Plans

Funds from the CEFA IFO will help fuel CETO Blockchain Family short-term roadmap [ambitions](#), including the building out of games and products across all three blockchains.

All of this would enable CETO Foundation to build out a **SaaS for gaming tokens** as well as a **launchpad** for both partnered and self-service/automated token launches. The passive income from trading, farming, and automated market-making will be plenty to get investors through the next - and any future - Crypto Winter.

RESEARCH

A [survey](#) of 349 accredited investors by Xangle were asked questions about decentralized finance. The highlights:

- **67%** had some knowledge of DeFi
- **72.2%** “were very likely to invest in Defi in the next 12 months”
- **70%** already invested in bitcoin

In a separate DeFi [survey by ARPA](#) of 700 respondents, the data revealed:

- **97%** had heard of DeFi
- **78%** were invested in DeFi tokens
- top three reasons to use DeFi:
 - liquidity mining/yield farming (74%)
 - significant interest rates (29%)
 - no KYC (27%)
- top three reasons not to use DeFi:
 - poor interest rate (58%)
 - poor user experience (20%)
 - security concerns (17%)

CEFA offers more of what you want with none of what you don't.

FREQUENTLY ASKED QUESTIONS

Can I make money with CEFA?

Yes. Through exchanging BNB for CEFA, you can earn in several ways:

- receiving dividends from transaction fees
- increase in price of CEFA, due to transactional and market-based activity
- rewards from staking/yield farming
- winning or earning CEFA from CETO Foundation games and products

Are you guaranteed to make money? No.

Is CEFA a security?

No. Because of the autonomous, decentralized nature of the CEFA contract, the CEFA token should not be considered as a security. CETO Foundation does not control how the CEFA contract works after it was launched. The CEFA smart contract does not offer or promise a rate of return; it is for entertainment purposes only.

Where can I stake CEFA?

Once the IFO sales allotment of 20M tokens is sold through, CEFA will seek to list on several exchanges and set up pools for yield farming. We have 1M tokens available to yield farm per 90 days for the first year and will notify you of where you may stake your tokens once we set up pools and provide liquidity to trading platforms.

We are very sensitive to potential, artificial dumping of CEFA, so you may see us act differently than other token projects. This isn't a pump-and-dump memecoin: CEFA is a pump-and-HOLD. 💪

Please make sure to stay informed by keeping up with our social media platforms or signing up for our newsletter, below.

Do I need to own CETO to buy CEFA? Or vice versa?

No. However, to ensure maximum future returns, it is in your best interests to own all four tokens in the CETO Blockchain Family: CETO, BCETO, ECETO, and CEFA.

CEFA and CETO will be complementary both in form and function. CEFA tokens will be available for use in all BCETO games and products in addition to providing transactional revenue for CETO Blockchain Family holders.

That each CEFA transaction will contribute to your CETO, ECETO, and BCETO dividends equally also will drive up the activity and value of your holdings.

Is CEFA a one-to-one value ratio with BNB?

No. The price of CEFA is determined by market forces and will likely fluctuate. However, because of the deflationary tokenomics designed to reduce supply the more popular CEFA becomes, you can expect the price to appreciate over time with utility and scarcity.

THANK YOU

CEFA will be one-stop shopping for the crypto investor to have access to the best parts of the DeFi passive income universe. With CEFA's ties to the CETO Blockchain Family, we anticipate a billion dollar-plus ecosystem of CETO/CEFA-related products that will serve as **universal basic income** for all who end up making even a one-time investment.

Our only limits are resources and time. We look forward to you planting your seed with us to make it all happen.

THANK YOU - and welcome to the Smart Farm!
